Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Each Clymer manual provides specific and detailed instructions for performing everything from basic maintenance and troubleshooting, to a complete overhaul of your vehicle. If you're a do-it-yourselfer, then you will find this service and repair manual fantastically more comprehensive than the factory manual. When it comes to repairs and modifications, Kawasaki KLR650 is an indispensable part of the tool box. Get ahold of your copy today, and keep your bike running tomorrow.

A vital guide to the frontlines of our fight against climate change and the scientific and technological innovations that will revolutionize the world. The United States' accelerated plans to combat the existential threat of climate change finally give reason to hope. In *Our Livable World*, research specialist and author Marc Schaus explores the incredible new green innovations in science and engineering that can allow us to avoid the worst repercussions of global warming as we work to usher in a sustainable, livable world. To beat a challenge the size of climate change, our solutions will have to be ambitious: solar thermal cells capable of storing energy long after the sun goes down, "smart highways" designed to charge your vehicle as you drive, indoor vertical farms automated to maximize crop growth with no pesticides, bioluminescent vines ready to one day replace our streetlights, jet fuel created from landfill trash--and next-generation carbon capture techniques to remove the emissions we have already released over the past several decades. Far from the geoengineering schemes of cli-fi action thrillers, real solutions are being developed, right this moment. *Our Livable World* features interviews with the innovators, real talk on the revolutionary technology, and a clear picture of a cleaner planet in the future. "An important book that shows the dawn of a new kind of environmental movement?an age where we invest in deeply creative and fascinating technical solutions that work in harmony with the Earth. Marc Schaus lays out the exciting future of environmental innovation before us." --Katie Patrick, author of *How to Save the World*
