If you ' re into technical diving then you know that to extend your depth range you need to use trimix – a blend of helium, oxygen and nitrogen. The Tec Trimix 65 course introduces you to using trimix down to a maximum depth of 65 metres/210 feet. There are advantages to using three gases, but you need to know how to do it right.

Technical Diving Tec Trimix 65 | PADI

Trimix is a breathing gas consisting of oxygen, helium and nitrogen and is used in deep commercial diving, during the deep phase of dives carried out using technical diving techniques, and in advanced recreational diving. The helium is included as a substitute for some of the nitrogen, to reduce the narcotic effect of the breathing gas at depth. With a mixture of three gases it is possible to create mixes suitable for different depths or purposes by adjusting the proportions of each gas. Oxygen

Trimix (breathing gas) - Wikipedia

Technical Diving Technical (tec) diving means going beyond recreational scuba diving limits. But, tec divers will tell you that it ' s really about the challenge and adventure of exploring places that no one else has ever seen. Tec diving is not for everyone, but it does attract experienced divers who want to go beyond their current limits and are willing to accept the added risks, training, investment and commitment it demands.

Technical Diving Course Offerings | PADI

PADI defines technical diving as "diving other than conventional commercial or recreational diving that takes divers beyond recreational diving limits (130 feet (40 m)). It is further defined as an activity that includes one or more of the following: diving beyond 40 meters/130 feet, required stage decompression, diving in an overhead environment beyond 130 linear feet from the surface, accelerated stage decompression and/or the use of multiple gas mixtures in a single dive."

Technical diving - Wikipedia

The ANDI Technical Trimix Diver program is basically comparable with the Technical SafeAir Diver program. The difference is, that no longer SafeAir (EAN) is used during the dives, but a normoxic Trimix. Due to the helium in the gas mix the depth limit has increased to 50 meters and the maximum decompression time has increased to 45 minutes.

Technical Trimix Diver - andi-international.com
