of a point, homothety,  
triangle centers; along the  
way the reader will meet  
such classical gems as the  
nine-point circle, the  
Simson line, the symmedian  
and the mixtilinear  
incircle, as well as the  
theorems of Euler, Ceva,  
Menelaus, and Pascal.  
Another part is dedicated to  
the use of complex numbers  
and barycentric coordinates,  
granting the reader both a  
traditional and  
computational viewpoint of  
the material. The final part  
consists of some more  
advanced topics, such as  
inversion in the plane, the  
cross ratio and projective  
transformations, and the

The emphasis of this book is placed squarely on the problems. Each chapter contains carefully chosen worked examples, which explain not only the solutions to the problems but also describe in close detail how one would invent the solution to begin with. The text contains a selection of 300 practice problems of varying difficulty from contests around the world, with extensive hints and selected solutions. This book is

An Introduction to  
Statistical Learning  
provides an accessible  
overview of the field of  
statistical learning, an  
essential toolset for making  
sense of the vast and  
complex data sets that have  
emerged in fields ranging  
from biology to finance to  
marketing to astrophysics in  
the past twenty years. This  
book presents some of the  
most important modeling and  
prediction techniques, along  
with relevant applications.  
Topics include linear  
regression, classification,  
resampling methods,  
shrinkage approaches, tree-  
based methods, support  
vector machines, clustering,

and more. Color graphics and real-world examples are used to illustrate the methods presented. Since the goal of this textbook is to facilitate the use of these statistical learning techniques by practitioners in science, industry, and other fields, each chapter contains a tutorial on implementing the analyses and methods presented in R, an extremely popular open source statistical software platform. Two of the authors co-wrote *The Elements of Statistical Learning* (Hastie, Tibshirani and Friedman, 2nd edition 2009), a popular reference book for statistics and machine

learning researchers. An Introduction to Statistical Learning covers many of the same topics, but at a level accessible to a much broader audience. This book is targeted at statisticians and non-statisticians alike who wish to use cutting-edge statistical learning techniques to analyze their data. The text assumes only a previous course in linear regression and no knowledge of matrix algebra.

An introduction to abstract algebraic geometry, with the only prerequisites being results from commutative algebra, which are stated as needed, and some elementary topology. More than 400 exercises distributed throughout the book offer specific examples as well as more specialised topics not treated in the main text, while three appendices present brief accounts of some areas of current research. This book can thus be used as textbook for an introductory course in algebraic geometry following a basic graduate course in algebra. Robin Hartshorne
