Forces which will make a complete denture retentive have been described as (a) physiological forces and, (b) physical forces. Physiological forces □ These forces are applied to the polished surfaces of the dentures by the muscles of the lips, the cheeks and the tongue. They rely on the patient's ability to learn a complex series of neuromuscular reflexes, and this varies from patient to ...

Read PDF A Primer On Complete Denture

A complete denture (also known as a full denture, false teeth or plate) is a removable appliance used when all teeth within a jaw have been lost and need to be prosthetically replaced. In contrast to a partial denture, a complete denture is constructed when there are no more teeth left in an arch, hence it is an exclusively tissue-supported prosthesis.

A Primer On Complete Denture Prosthodontics

When a complete denture is applied to only one of the jaws in the mouth, it is called a SCD. SCD may be opposing a natural dentition, a fixed partial denture, an existing partial denture, and a present complete denture.

During the fabrication of SCD, each of the opposing conditions has to overcome different challenges.
