This advanced economics text bridges the gap between familiarity with microeconomic theory and a solid grasp of the principles and methods of modern neoclassical microeconomic theory.

This book presents Ariel Rubinstein's lecture notes for the first part of his well-known graduate course in microeconomics. Developed during the fifteen years that Rubinstein taught the course at Tel Aviv University, Princeton University, and New York University, these notes provide a critical assessment of models of rational economic agents, and are an invaluable supplement to any primary textbook in microeconomic theory. In this fully revised and expanded second edition, Rubinstein retains the striking originality and deep simplicity that characterize his famously engaging style of teaching. He presents these lecture notes with a precision that gets to the core of the material, and he places special emphasis on the interpretation of key concepts. Rubinstein brings this concise book thoroughly up to date, covering topics like modern choice theory and including dozens of original new problems. Written by one of the world's most respected and provocative economic theorists, this second edition of Lecture Notes in Microeconomic Theory is essential reading for students, teachers, and research economists. Fully revised, expanded, and updated Retains the engaging style and method of Rubinstein's well-known lectures Covers topics like modern choice theory Features numerous original new problems--including 21 new review problems Solutions manual (available only to teachers) can be found at: http://gametheory.tau.ac.il/microTheory/.

Preface -- Preferences and utility -- Demand theory -- Demand theory : applications -- Production theory -- Choice under uncertainty -- Partial and general equilibrium -- Monopoly -- Imperfect competition -- Externalities and public goods -- Contract theory -- Notes -- Index

Provides a rigorous treatment of some of the basic tools of economic modeling and reasoning, along with an assessment of the strengths and weaknesses of these tools.

\*PRICES AND OPTIMIZATION 1.1 SUPPORTING PRICES 1.2 SHADOW PRICES 1.3 THE ENVELOPE THEOREM 1.4 FOUNDATIONS OF CONSTRAINED OPTIMIZATION 1.5 APPLICATION: MONOPOLY PRICING WITH JOINT COSTS 1.1 SUPPORTING PRICES Key ideas: convex and non-convex production sets, price based incentives, Supporting Hyperplane Theorem Pursuit of self-interest is central to economics. Thus a deep understanding of the theory of maximization is essential to effective theorizing. In particular, the theory of constrained maximization is so crucial that we explore it in this first chapter. In contrast to a purely mathematical exposition, the emphasis here is on prices"--

It is impossible to understand modern economics without knowledge of the basic tools of gametheory and mechanism design. This book provides a graduate-level introduction to the economic modeling of strategic behavior. The goal is to teach Economics doctoral students the tools of game theory and mechanism design that all economists should know.

Two neuroscience experts explain how their 4-Step Method can help break destructive thoughts and actions and change bad habits for good. A leading neuroplasticity researcher and the coauthor of the groundbreaking books Brain Lock and The Mind and the Brain, Jeffrey M. Schwartz has spent his career studying the structure and neuronal firing patterns of the human brain. He pioneered the first mindfulness-based treatment program for people suffering from OCD, teaching patients how to achieve long-term relief from their compulsions. For the past six years, Schwartz has worked with psychiatrist Rebecca Gladding to refine a program that successfully explains how the brain works and why we often feel besieged by bad brain wiring. Just like with the compulsions of OCD patients, they discovered that bad habits, social anxieties, self-deprecating thoughts, and compulsive overindulgence are all rooted in overactive brain circuits. The key to making life changes that you want to make your brain work for you is to consciously choose to "starve" these circuits of focused attention, thereby decreasing their influence and strength. As evidenced by the huge success of Schwartz's previous books, as well as Daniel Amen's Change Your Brain, Change Your Life, and Norman Doidge's The Brain That Changes Itself, there is a large audience interested in harnessing the brain's untapped potential, yearning for a step-by-step, scientifically grounded and clinically proven approach. In fact, readers of Brain Lock wrote to the authors in record numbers asking for such a book. In You Are Not Your Brain, Schwartz and Gladding carefully outline their program, showing readers how to identify negative brain impulses, channel them through the power of focused attention, and ultimately lead more fulfilling and empowered lives.
