How AJAX Works. 1. An event occurs in a web page (the page is loaded, a button is clicked) 2. An XMLHttpRequest object is created by JavaScript; 3. The XMLHttpRequest

Acces PDF Ajax Web

object sends a request to a web server; 4. The server processes the request; 5. The server sends a response back to the web page; 6. The response is read by JavaScript; 7.

Ajax is a set of web
development
techniques using
many web
technologies on the
client side to create
asynchronous web
applications. With
Ajax, web
applications can send

Access PDF Ajax Web

and retrieve data from a server asynchronously without interfering with the display and behaviour of the existing page. By decoupling the data interchange layer from the presentation layer, Ajax allows web pages and, by extension, web

Acces PDF Ajax Web

applications, to
change content
dynamically without
the need to reload
the entire page. In
pract

by Step, 2nd edition.

This textbook is designed for use in an introductory web programming course for students who have had a bit of prior introduction to programming (CS1-equivalent) or more. Web Programming Step by Step is written for a broad audience

Acces PDF Ajax Web

with material that has been used in the classroom with hundreds of undergraduates at the University of Washington, most of whom were not computer science majors.

Web Programming
Step by Step, by
Marty Stepp, Jessica

Acces PDF Ajax Web

...Programming

The browser performs a JavaScript call to the Ajax engine. In other words, create an XMLHttpRequest object. In the background, an HTTP request is made to the server and the appropriate data is retrieved. HTML, XML, or JavaScript

Access PDF Ajax Web

data is returned to the Ajax engine which then delivers the requested data to the browser.

Ajax Tutorial for
Beginners: Part 1 -

CodeProject

AJAX stands for
Asynchronous
JavaScript and XML.

AJAX is a new
technique for
creating better,
faster, and more
interactive web
applications with the
help of XML, HTML,

Access PDF Ajax Web

CSS, and Java Script.
Ajax uses XHTML for
content, CSS for
presentation, along
with Document
Object Model and
JavaScript for
dynamic content
display.

What is AJAX? -
