Understanding and use of blood gas analysis enables providers to interpret respiratory, circulatory and metabolic disorders. A "blood gas analysis" can be performed on blood obtained from anywhere in the circulatory system (artery, vein, or capillary). An arterial blood gas (ABG) specifically tests blood taken from an artery.

~~Arterial Blood Gas~~

An Arterial Blood Gas, or ABG for short, is a test that measures the blood levels of oxygen (PaO_2), carbon dioxide (PaCO_2), and acid-base balance (pH) in the body. It's a test that is used to assess how well oxygen is being distributed throughout the body and how well carbon dioxide is being removed.

with a syringe and a thin needle, but sometimes the femoral artery in the groin or another site is used. The blood can also be drawn from an arterial catheter. An ABG test measures the blood gas tension values of the arterial partial pressure of oxygen, and the arterial partial pressure of carbon dioxide, and the b

~~Arterial blood gas test - Wikipedia~~

When interpreting arterial blood gas (ABG) results, it is essential to know what ABG values are considered "normal". From this baseline, you can then begin to recognise significant variations in a patient's results, which could indicate clinical deterioration.
