For double gates set "INot" under Logic settings to "Off" and set "tdNo" and "tdNc" in Parameters to the desired value (both "0" if no delays required). Setting slow down to 40 before programming is usually a better result. In parameters set "SLd1" and "SLd2" to "40" The most common setup we use is no limit switch and no encoder.

Enlarged, enhanced and internationalized edition of the first restoration ecology textbook to be published, with foreword by Dr. Steven Whisnant of Texas A&M University and Chair of the Society of Ecological Restoration. Since 2006, when the first edition of this book appeared, major advances have taken place in restoration science and in the practice of ecological restoration. Both are now accepted as key components of the increasingly urgent search for sustainability at global, national, and community levels – hence the phrase 'New Frontier' in the title. While the first edition focused on ecosystems and landscapes in Europe, this new edition covers biomes and contexts all over the world. Several new chapters deal with broad issues such as biological invasions, climate change, and agricultural land abandonment as they relate to restoration science and ecological restoration. Case studies are included from Australia, North America, and the tropics. This is an accessible textbook for senior undergraduate and graduate level students, and early career scientists. The book also provides a solid scientific

background for managers, volunteers, and mid-career professionals involved in the practice of ecological restoration. Review of the first edition: "I suspect that this volume will find its way onto the shelves of many restoration researchers and practitioners and will be used as a key text in graduate courses, where it will help fill a large void. My own copy is already heavily bookmarked, and will be a constant source of research ideas and lecture material." (Environmental Conservation) Companion Website: A companion website with downloadable figures is available at <http://www.wiley.com/go/vanandel/restorationecology>

Part of the highly regarded Diagnostic Pathology series and written by Danny A. Milner, Jr., MD, this updated volume covers all aspects of infectious disease pathology, including anatomic manifestations and how to ensure a complete and accurate sign out at the microscope. Concise, focused chapters, supported by thousands of high-quality images, make this second edition an excellent point-of-care resource for pathologists at all levels of experience and training—both as a quick reference and as an efficient review to improve knowledge and skills. Provides essential information by organism type (virus, bacteria, fungi, and parasite), further divided by those organisms that can be diagnosed on histological appearance, to help you quickly and accurately identify what you see at the microscope. Contains new information on Zika virus, rhinosporidiosis, coenurosis, and more, as well as new material on approaching emerging infections with a biosafety/notification focus. Features additional figures and diagrams to help with rare organism identification, and new details on an algorithmic approach to identification. Includes coverage of iatrogenic immunosuppression and organism correlations, explanatory life cycles with emphasis on when pathology occurs, updated diagnostics sections on molecular testing, and diagrammatic correlations of viruses with accompanying electron microscope imagery. Contains time-saving features such as bulleted text, annotated images, reference tables, and more. Offers Key Facts that highlight the quick criteria needed for diagnosis or evaluation at the time of a procedure. Explains when and when not to use molecular diagnostics, and discusses histological limitations and how to address them at sign out.

With the help of this compact guide, anyone suffering from CRPS (Complex Regional Pain Syndrome) (also known as RSD – Reflex Sympathetic Dystrophy) will better understand their condition and cope with the reality of living with it. Prof Karen Rodham draws on a wealth of clinical experience to give tried-and-tested practical advice for managing this very complex and debilitating syndrome, about which very little is understood by the medical community at large. Ten first-hand patient accounts of living with CRPS illustrate just how wide-ranging the impact can be physically, socially and emotionally, and what has helped on an individual basis. This book's hands-on guidance will be of great help to people diagnosed with CRPS and show family and friends how they can best provide support. It is also an essential resource for health psychologists working with CRPS patients.
