Conducting Lab Using Probes and Computer/Calculator. Tip: "I have used the BSCS blue lab (on enzyme action) with great results. This lab procedure is also easily adaptable to use with the TI-83 calc, CBL, and gas pressure probe. I usually run the basic lab procedure looking at amount of enzyme vs. H₂O₂ produced.

Lab 2 Enzyme Catalysis. Introduction: Enzymes are proteins produced by living cells. They are biochemical catalysts meaning they lower the activation energy needed for a biochemical reaction to occur. Because of enzyme activity, cells can carry out complex chemical activities at relatively low temperatures.

Enzyme Catalysis Lab Report - StuDocu

Enzymes are proteins produced by living cells. Enzyme-catalysis binds with the active site of an enzyme, reducing the amount of energy needed to have a reaction with the substrate. Catalysis is a substance that lowers reaction energy and allows the reaction to take place in less time and at lower temperatures.

The enzyme used in this lab, catalase, has four polypeptide chains, each composed of more than 500 amino acids. This enzyme is ubiquitous in aerobic organisms. One function of catalase within cells is to prevent the accumulation of toxic levels of hydrogen peroxide formed as a byproduct of metabolic processes.

AP Biology Handbook

Enzymes are the catalysts of biological systems. They speed up chemical reactions in biological systems by lowering the activation energy, the energy needed for molecules to begin reacting with each other. Enzymes do this by forming an enzyme-substrate complex that reduces energy required for the specific reaction to occur.
