New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

A broad survey of the historical development of the prison in the Middle East. The Middle Eastern prison has been a potent site of penal practice, political struggle, social definition and cultural contest. This is evident in its establishment and growth as an instrument of colonial and statepower, and its political relevance in containing dissent and legitimating authority: it reflects much about the society of which it is a part. This book addresses the development of prison practice in the Middle East (the Arab world, including North Africa, the Ottoman Empire, the Turkish Republic, and Iran) through the 19th century and into the first half of the 20th century. It opens new fields of enquiry by placing contemporary practices and issues such as the treatment of Iraqi inmates at Abu Ghraib and extraordinary rendition within their historical context. And it provides an important comparative resource for the historical development of the prison internationally. Addressing the practice of imprisonment in a range of institutional settings (prisons, reformatories, labour and concentration camps), detailed case and thematic studies are used to illustrate particular aspects and ideas.

The history of precision technology may seem a small, specialised subject, concerned with the development of such mundane, even banal objects as sun-dials, sand-glasses, clocks or rulers and other measuring instruments. Yet their development, as the author holds, has helped condition how we relate to the natural world and is therefore a key aspect of cultural history. For many classes of instruments there are still no basic narrative accounts of their internal evolution, and a number of these studies represent an effort towards fulfilling that need. In others, starting with an object or an object and its maker, the author asks what did it do, and then who wanted it to do it and why, penetrating into the more general social context. In time the studies range from Antiquity to the 19th century, but the emphasis is on the period from the 16th century onwards. L'histoire de la technologie de précision peut paraître comme étant un sujet spécialisé de moindre importance, se rapportant au développement d'objets quelconque, voire banals, tels les cadrans solaires, les sabliers, les horloges, les règles et autres

instruments de mesure. D'après l'auteur, leur développement a cependant contribué à déterminer la façon dont nous nous rapportons au monde naturel et fait de ceux-ci l'un des aspects à la clef de notre histoire culturelle. Pour un bon nombre de catégories d'instruments, il n'existe toujours pas de relation de base concernant leur évolution interne; un effort a été accompli au travers de certaines des études contenues dans ce recueil, afin de combler cette lacune. Dans d'autres, l'auteur, débutant par un objet seul, ou bien encore un objet et son créateur, pose la question de savoir ce à quoi celui-ci servait, à qui il était destiné à servir et pourquoi, pérennément ainsi dans un contexte social plus généralisé. Du point de vue de la chronologie, les études partent de l'Antiquité et vont jusqu'au 19<sup>e</sup> siècle, l'accent étant surtout mis à partir du 16<sup>e</sup> siècle.

Essays discuss the significant events, people, movements, and organizations that shaped and reflected the life of the nineteenth-century activist who spearheaded temperance, women's suffrage, and abolitionist movements.
