Heisenberg explains the central ideas of the quantum revolution, and his uncertainty principle. He reveals how words can lose their meaning in the world of relativity and quantum physics, with philosophical implications for the nature of reality.

From July to December in 1945, ten German scientists, Bagge, Diebner, Gerlach, Hahn, Harteck, Heisenberg, Korsching, von Laue, von Weizsacker, and Wirtz, were held and clandestinely recorded by the British. The scientists discuss their progress and react to the bombing of Hiroshima.

Examines the basic goals, vocabulary, and assumptions of the natural sciences, social sciences, and humanities, summarizing their unique contributions to our understanding of human nature and its variation.

This text originates from the second of two conferences discussing the concept of consciousness. In 15 sections, this book demonstrates the broad range of fields now focusing on consciousness.

A systematic critique of the notion that natural science is the sovereign domain of truth, Critique of

Scientific Reason uses an extensive and detailed investigation of physics—and in particular of Einstein's theory of relativity—to argue that the positivistic notion of rationality is not only wrongheaded but false. Kurt Hübner contends that positivism ignores both the historical dimension of science and the basic structures common to scientific theory, myth, and so-called subjective symbolic systems. Moreover, Hübner argues, positivism has led in our time to a widespread disillusionment with science and technology.

Sponsored by the National Science Teachers Association, this handbook provides a uniquely comprehensive and current survey of the best research in science education compiled by the most renowned researchers. More than summaries of findings, the content provides an assessment of the significance of research, evaluates new developments, and examines current conflicts, controversies, and issues in the major science disciplines: biology, chemistry, physics, and earth science.

From the primitive pine-torch to the paraffin candle, how wide an interval! between them how vast a contrast! The means adopted by man to illuminate his home at night, stamp at once his position in the scale of civilisation. The fluid bitumen of the far East, blazing in rude vessels of baked earth; the Etruscan lamp, exquisite in form, yet ill adapted to its office; the whale, seal, or bear fat, filling the hut of the Esquimaux or Lap with odour rather than light; the huge wax candle on the glittering altar, the range of gas lamps in our streets,—all have their stories to tell. All, if they could speak (and, after their own manner, they can), might warm our hearts in telling, how they have ministered to man's comfort, love of home, toil, and devotion. Surely, among the millions of fire-worshippers and fire-users who have passed away in earlier ages, some have pondered over the mystery of fire; perhaps some clear minds have guessed shrewdly near the truth. Think of the time man has lived in hopeless ignorance: think that only during a period which might be spanned by the life of one man, has the truth been known. Atom by atom, link by link, has the reasoning chain been forged. Some links, too quickly and too slightly made, have given way, and been replaced by better work; but now the great phenomena are known—the outline is correctly and firmly drawn—cunning artists are filling in the rest, and the child who masters these Lectures knows more of fire than Aristotle did. The candle itself is now made to light up the dark places of nature; the blowpipe and the prism are adding to our knowledge of the earth's crust; but the torch must come first.

This volume contains articles on topics within a variety of disciplines: political philosophy, ethics, history of philosophy, formal logic, philosophy of science and technology, as well as philosophical interpretation of literature. It is relevant to philosophers and researchers in these disciplines. It addresses the question of a genuine Latin American local, national and continental cultural identity being a challenge to philosophy.
