The Institute of Medicine (IOM)'s 2011 report 1 provides the following broad definition: "Cognitive rehabilitation attempts to enhance functioning and independence in patients with cognitive impairments as a result of brain damage or disease, most commonly following TBI or stroke." (IOM, 2011, p. 76). It clarifies that CRT is different from cognitive behavioral therapy, a treatment approach for emotional and psychiatric problems.

*What About Cognitive Rehabilitation Therapy? | BrainLine*

Abstract. Cognitive rehabilitation (CR) is a promising treatment approach for older adults with dementia because it aims at supporting the management of day-to-day problems. There

Cognitive rehabilitation attempts to enhance functioning and independence in patients with cognitive impairments as a result of brain damage or disease, most commonly following TBI or stroke. As with physical rehabilitation, cognitive rehabilitation may include interventions that aim to lessen impairments, or interventions that aim to lessen the disabling impact of those impairments.
