OpenGL is a cross-language, cross-platform API for rendering 2D and 3D Vector Graphics. Using this, we can make a lot of design as well as animations. Below is the simple animation made using OpenGL.

Approach : To make a picture moving, we need to understand the working procedure of a function used to display i.e `glClear(GL_COLOR_BUFFER_BIT)`. Its task is to clear screen with default value after a certain time (normally, after 1/30 sec or 1/60 sec).
