Cryptosporidium and Cryptosporidiosis | Taylor & Francis Group

Cryptosporidium spp. are apicomplexan parasites that inhabit the brush borders of the gastrointestinal and respiratory epithelium. Initially thought to be only a pathogen of young animals such as calves and lambs, cryptosporidiosis is now known as an important cause of diarrhea, enterocolitis, and cholangiopathy in humans (Checkley et al. 2015).

---

Cryptosporidium and Cryptosporidiosis | SpringerLink

Stool samples from seven students and two calves yielded *Cryptosporidium parvum*. Students cared for animals in street clothes and practised poor hand washing. During the second outbreak, 37/81 (46%) interviewed animal science students were ill. Risk factors included having visible manure on hands, and wearing coveralls and boots.

---

Recurrent outbreaks of cryptosporidiosis associated with ...

Cryptosporidiosis is often observed as a pediatric disease in areas where *Cryptosporidium* spp. are endemic. Children <2 years of age are frequently infected in these areas in community (1,4) and hospital settings. The spectrum of symptoms is diverse, ranging from acute diarrhea, severe chronic diarrhea (), or vomiting to asymptomatic infections (2,3).
