## **[DOC] Developing With Delphi Object Oriented Techniques**

An object is an instance of a class. Just the same as declaring a variable, for example `Var I : Integer; I` is the instance of datatype integer. In other words, the class is the receipt and the object is the cake. In Delphi a Class always start with the capital letter T. (this is a convention) `var car : TVerhicle; Car` is the object.

## **Object Oriënted Programming with Delphi [English]**

In Object Oriented Programming (OOP), you write programs that manipulate objects. An object is a combination of data and program code; it is created from a class (a kind of template, blueprint). You could think of "dog" as a class and your particular dog as an object, an instance of the class "dog". Delphi's VCL (Visual Component Library) is a collection of classes to create objects such as forms,

tables, queries, radio buttons, check boxes, etc.

## **OOP in Delphi - Object - Class**

Objects also allowed events, such as mouse clicks, to be handled neatly - a button object could call a routine (method) of another object when clicked. This was now true modularisation. The basic parts of an object oriented program: The basic building block of an Object Oriented (OO) program is a Class. It defines data (now called fields) and ...

## **Developing With Delphi Object Oriented Techniques ...**

Delphi is an excellent Rapid Application Development (RAD) tool and can produce outstanding programs. Delphi users will notice that most of the API window creation code is hidden from them, and handled in the background in the "Forms" and "Controls" units. Many Delphi developers think they are programming in a "Windows" environment, when they are really working in a "Delphi" environment with Object Oriented delphi code "wrappers" for the windows API functions.

## **Delphi programs in API - Angelfire**

Delphi is a software product that uses the Object Pascal programming language and provides an integrated development environment for rapid application development of desktop, mobile, web, and console software, currently developed and maintained by Embarcadero Technologies. Delphi's compilers generate native code for Microsoft Windows, macOS, iOS, Android and Linux. Delphi includes a
