Sheep is an animal whose brain is noticeably similar to the human brain. One difference is that the sheep does not have the ability to think, and that simply makes their brain less efficient than the human brain.

Reprinted in its entirety from Experimental Neurobiology: A Laboratory Manual, chapter 3

Presents photographic images of the dissected brain of a sheep, provided by the Neuroscience Program at the University of Scranton. Includes various structures of the brain. Explains that the images are searchable by the name of the structure or the plate number. Contains a self-quiz feature that allows the image to pause before a label is added to the image.
