The transfer case contains a Transfer Case Clutch Coil, which is what locks the front and rear driveshafts together. Power for the TCCC is fed via a brown wire, hence the familiar name. The Transfer Case Clutch draws approximately 5A of current. Make sure that all the components used in the wiring and switch are rated for at least 10A to be safe.

If you really wanted to convert your hubs you would have to change your front axle along with steering knuckles, tie rods and pretty much your whole front end. When I got mine I just popped off the old hubs and slid the new ones on and I was done. Now a manual transfer case requires quite a bit of work.
