Fluid Dynamics LLC is a specialized fluid connector distributor focused on the MRO and OEM markets from a wide range of industries. From our beginning in 1999, our mission has been customer satisfaction through helping them solve their problems and providing them with quality service. Today, with our quality products, value-added services, and our technically competent staff, we feel we are in the best position to help you.

Fluid dynamics is a subdiscipline of fluid mechanics that deals with fluid flow—the science of liquids and gases in motion. Fluid dynamics offers a systematic structure—which underlies these practical disciplines—that embraces empirical and semi-empirical laws derived from flow measurement and used to solve practical problems.

Amirhossein Arzani. (Northern Arizona University) Obtaining high-fidelity blood flow data is a challenging task. High-resolution patient-specific computational fluid dynamics (CFD) simulations are sensitive to uncertainty in boundary conditions and model parameters. On the other hand, imaging methods such as time resolved phase contrast magnetic resonance imaging (a.k.a 4D-Flow MRI) suffer from low spatio-temporal resolution and acquisition noise.

Molecular dynamics (MD) is a computer simulation method for analyzing the physical movements of atoms and molecules. The atoms and molecules are allowed to interact for a fixed period of time, giving a view of the dynamic "evolution" of the system. In the most common version, the trajectories of atoms and molecules are determined by numerically solving Newton's equations of motion for a system ...
