For the World Food Programme (WFP), working to prevent, mitigate and prepare for disasters is an essential part of its mandate to combat global hunger. As many as half of WFP’s programmes address the risks of natural disasters and their repercussions on food security, reaching approximately 80 million people each year. WFP’s policy on Disaster Risk Reduction commits it to preventing acute hunger and investing in disaster preparedness and mitigation measures.

This book draws examples from food security issues in Bangladesh. The book is structured around those issues and underlying causes of food security, the implications from different sectors, policy analysis, and the role and actions of various stakeholders from different sectors to ensure food security. Bangladesh is situated in a climatically vulnerable position and is impacted frequently by such climatic hazards as floods, cyclones, droughts, and salinity intrusion. Due to global atmospheric changes, abrupt shifts in climatic conditions severely affect Bangladesh’s agriculture. Although Bangladesh has made significant progress in increasing domestic production of food grain, if the production of major cereals is hampered due to climate change, food security will be in jeopardy. Most estimates show that a huge amount of additional food grain will be required to feed the growing population of the country. Ensuring food security for all is the overarching goal of Bangladesh’s national food policy. Therefore, ensuring food security in the future requires a great deal of additional effort in yield improvement, with limited scope for expanding the area under cultivation. The primary target readers for this book are students and researchers in the fields of environment, disaster risk reduction, and climate change studies. The book will provide them with a good idea of the current trend of research in the field and will furnish basic knowledge on this important topic. Another target group comprises practitioners and policy makers, who will be able to apply collective knowledge to policy and decision making.

The FAO Disaster Risk Reduction for Food and Nutrition Security Framework Programme aims to provide strategic direction to the implementation of disaster risk reduction measures in member countries across the agricultural-related sectors in line with the Hyogo Framework for Action and its five priority areas. In addition, it pro[?\?[[\Y\?\[\H[B?[[X]X?\ \ \\?YX?[[]][?B]KH[Y?][?HY?X?\K]\ \?\Y\ \?H[B]\[\?\?X[Y?Y[\ [?HYX?][H?CB]\?][Z [\?[H\Y\?[?H?\ X X X]H?\ \\ [?B [MN?\ [OI ZY N [B [L [OI ZY N [B?BZY?L?[OI?ZY?MK ?BZY?L?\ [OI?ZY?MK \] I?M?LLL ?MO?B?\?H?[OI \] N \[Y?I B?\ [OI \] N \[Y?I B?\?H?[OI \] N \[Y?I B?\ [OI \] N \[Y?I H['B]HHH?YH O?[?[OI?\?N?I?[XH?X?[?B[[?X?[[?B?\ [OI \] N \[Y?I B?\?H?[OI \] N \[Y?I B?\?H?[OI \] N \[Y?I B?\ [OI \] N \[Y?I?T L?B?\ [OI \] N \[Y?I [Y?X?\CB"][? This book focuses on exploring the linkages between natural disasters and sustainable development at the global, regional, and national levels. Disasters and development are closely related, yet the disciplinary silos prevail and there is little communication and cooperation between the disaster management, environment, and development communities. One catastrophic event, such as an earthquake, tsunami, or cyclone, can destroy infrastructure, people’s lives and livelihoods, and set back development. Similarly, slow onset disasters—often associated with global climate change—pose threats to development, livelihoods, food security, and long-term sustainable development. This book is uniquely aimed at bridging the gaps between the environmental, development, and disaster management communities. It traces the evolution of concepts and practice and highlights the linkages between natural disasters and sustainable development in key sectors, including food security, health, and water. The book includes case studies from the field highlighting the complex issues that challenge sustainable development and disaster risk management in practice. It draws policy conclusions for the global community based on state-of-the art knowledge from research and practice. The primary target groups for the book are researchers, including graduate students, in the fields of environment and sustainable development, geography, disaster risk reduction, and climate change studies. The second target group comprises practitioners and policymakers working in national and international organizations, the private sector, and civil society.

The eastern Africa sub-region has experienced recurrent drought and other climate-related impacts, with damaging effects on agriculture, food security and development. This report discusses institutional improvements for addressing disaster risks and presents options to strengthen the climate resilience of the agriculture and food sectors.

First published in 2008.

This book offers an essential, comprehensive, yet accessible reference of contemporary food security discourse and guides readers through the steps required for food security analysis. Food insecurity is a major obstacle to development and achievement of the Sustainable Development Goals. It is a complex issue that cuts across traditional sectors in government and disciplines in academia. Understanding how multiple elements cause and influence food security is essential for policymakers, practitioners and scholars. This book demonstrates how evaluation can integrate the four elements of food security (availability, access, nutrition and resilience) and offers practical tools for policy and programme impact assessment to support evidence-based planning. Aimed at researchers, postgraduates and those undertaking professional development in food studies, agricultural economics, rural development, nutrition and public health, the book is key reading for those seeking to understand evidence-based food security analysis.

South-East Asia is regularly hit by droughts. Though starting slowly, droughts can have devastating cumulative impacts – striking hardest at the poor and heightening inequality, as well as degrading land and increasing the prospects of violent conflict. There will be many more dry years ahead, and the area affected by drought is likely to shift and expand. Ready for the Dry Years offers a clear analysis of this subject, assessing prospects for the decades ahead and highlighting the principal risks. Building resilience will be fundamental for the continued development of ASEAN countries. issued jointly by the ESCAP and ASEAN secretariats, the Report identifies the priorities for increasing resilience to drought and helping countries adapt. The primary audience of this report are policymakers in South-East Asia who are responsible for disaster risk reduction and development issues.

Civil society organizations (CSOs) have played important roles over the years in the disaster field. Starting from the traditional approach of response and relief, the emphasis has gradually shifted to disaster risk reduction. From international nongovernmental organizations (NGOs) to national and local NGOs, all stakeholders have recognized the significance of and need for community-based risk reduction. In their different capacities they have endeavored to establish links to the policy options at the local and national levels. There still are many issues that remain untouched by CSOs, however, and local CSOs face special challenges in resources in terms of human, financial, and technical issues. Drawing examples from Asia, this book is structured on the roles of CSOs according to the Hyogo Framework for Action priority areas: policy making, risk assessment, education and training, underlying risk factors, and response–recovery. The primary target groups for this book are students and researchers in the fields of environment, disaster risk reduction, and climate change studies. The book provides a clear view of the current trends of research in the field and furnishes basic knowledge on these important topics. Another target group comprises practitioners and policy makers, who will be able to apply the knowledge collected here to policy and decision making.

As part of the work implemented by CGIAR on COVID-19, the COVID-19 Research Hub Working Group 4 “Address food systems’ fragility and build back better” was tasked with implementing a global assessment of the impacts of COVID-19 on food systems and their actors, focusing specifically on the consequences that the pandemic had brought on the food security and nutrition of those who have been affected by the crisis. This includes formal and informal actors of the food supply chains (from producers to street vendors) as well as consumers, in both rural and urban environments. Building on this assessment, the task was then to draw on key principles of resilience in the context of humanitarian and food security crisis, to identify preliminary elements of a food system resilience research agenda.

Through assessing climate disaster law in relation to international, public, private and environmental law this Research Handbook considers the unique challenges, barriers and opportunities that climate disasters pose for law and policy. Scientific and empirical evidence suggests that the laws addressing natural disasters cannot be adequately applied to disasters that are caused by climate change. Featuring contributions from leading international experts, this Research Handbook will be a useful resource for those with an interest in environmental law and international policymaking.
