Paleobiology struggled for decades to influence our understanding of evolution and the history

# Online Library For The Record

of life because it was stymied by a focus on microevolution and an incredibly patchy fossil record. But in the 1970s, the field took a radical turn, as paleobiologists began to investigate processes that could only be recognized in the fossil record across larger scales of time and space. That turn led to a new wave of macroevolutionary

# Online Library For The Record

investigations, novel insights into the evolution of species, and a growing prominence for the field among the biological sciences. In *The Quality of the Archaeological Record*, Charles Perreault shows that archaeology not only faces a parallel problem, but may also find a model in the rise of paleobiology for a shift in

# Online Library For The Record

the science and theory of the field. To get there, he proposes a more macroscale approach to making sense of the archaeological record, an approach that reveals patterns and processes not visible within the span of a human lifetime, but rather across an observation window thousands of years long and thousands of

# Online Library For The Record

kilometers wide. Just as with the fossil record, the archaeological record has the scope necessary to detect macroscale cultural phenomena because it can provide samples that are large enough to cancel out the noise generated by micro-scale events. By recalibrating their research to the quality of the archaeological record

# Online Library For The Record

and developing a true macroarchaeology program, Perreault argues, archaeologists can finally unleash the full contributive value of their discipline.

This User ' s Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to

increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or

more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical

effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical

products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User ' s Guide was created by researchers

care for congestive heart failure patients. The steps described include the adoption of a conceptual framework for nursing quality, nursing expert review, development of the Congestive Heart Failure Implicit Review Form and Instruction Manual (reproduced in Appendices B and C), and the selection and training of reviewers. Key

# Online Library For The Record

principles of implicit review are summarized, and the medical record sample is described. The Congestive Heart Failure Review Form consists of 19 questions. To structure the quality review, these questions guide the reviewer through specific aspects of nursing process: 1) assessment, 2) identification of

problems, and 3) problem management, including development of nursing goals, interventions, and evaluation. The form then asks reviewers to rate the overall quality of care. It also collects information on patient acuity, expected outcomes, adverse events, and charting methods.

Regional health care databases are being established around the country with the goal of providing timely and useful information to policymakers, physicians, and patients. But their emergence is raising important and sometimes controversial questions about the collection, quality, and

The committee explores how HDOs can maintain the quality of their data, what policies and practices they should adopt, how they can prepare for linkages with computer-based patient records, and how diverse
