Apart from being literate it is also important to be financially literate because 2/3rd of our lives is spent on earning, spending, saving and investing, for ourselves and for others. Given the uncertain times that we live in depending on bank fixed deposits, gold and/or real estate to build our wealth or reach our financial goals would be a futile attempt. It is time that we start looking beyond the obvious and start educating ourselves with the all important knowledge of managing our finances by understanding the opportunities. If we ignore or shy away from acquiring such knowledge there would be no one to blame except ourselves. There are several myths, misconceptions, prejudices and fear surrounding various asset classes that includes stocks, mutual funds and insurance which this book, stories weaved through conversational mode, endeavours to clear the haze by offering clarity over financial instruments answering several critical questions and can confidently say the content would enhance the knowledge on various financial products and services that is presented through lots of examples explained using simple language. The content can also be treated as a self-help book on simplifying the investment knowledge. The final outcome after reading the book would be the feeling of being an informed investor.

In the post-genomic era, a holistic understanding of biological systems and processes, in all their complexity, is critical in comprehending nature's choreography of life. As a result, bioinformatics involving its two main disciplines, namely, the life sciences and the computational sciences, is fast becoming a very promising multidisciplinary research field. With the ever-increasing application of large-scale high-throughput technologies, such as gene expression microarrays and mass spectrometry methods, the enormous body of information is growing rapidly. Bioinformaticians are posed with a large number of difficult problems to solve, arising not only due to the complexities in acquiring the molecular information but also due to the size and nature of the generated data sets and/or the limitations of the algorithms required for analyzing these data. Although the field of bioinformatics is still in its embryonic stage, the recent advancements in computational and information-theoretic techniques are enabling us to conduct various in silico testing and screening of many lab-based experiments before these are actually performed in vitro or in vivo. These in silico investigations are providing new insights for interpretation and establishing a new direction for a deeper understanding. Among the various advanced computational methods currently being applied to such studies, the pattern recognition techniques are mostly found to be at the core of the whole discovery process for apprehending the underlying biological knowledge. Thus, we can safely surmise that the - going bioinformatics revolution may, in future, inevitably play a major role in many aspects of medical practice and/or the discipline of life sciences.
