In South Auckland, New Zealand, Mannie and his wife, Jo, have finally achieved stability. Mannie's successful job as a carpenter gives the couple hopes for a future home and children. But it's all about to come tumbling down. When Wall Street crashes in 2005, the New Zealand economy plunges into a recession. Mannie loses his job and is forced to apply for the unemployment benefit to survive. Worse, he and Jo must take in boarders in order to make the rent. But Mannie soon sees his misfortune as an opportunity to reclaim land in the Tongariro National Park that belonged to his Maori tribe more than one hundred and thirty years ago. Mannie persuades a small, disillusioned group of young Maori into claiming sovereignty over a small block of land on the side of a mountain, offering freedom and peace in protest against the government. They build huts and live off the land. Mannie and Jo try to find their former happiness, but then tragedy strikes, and Mannie suddenly finds himself in a deadly game of survival.

In this story, Stingo and Slugsy try to trick Pip into doing their jobs by dressing up as a genie. At the end of the story are instructions to help children grow their own bean plant.

Originally published in hardcover in 2019 by Doubleday.

"The textbook is an overview of Canada's legal system, meets LSO guidelines, and will serve as a comprehensive, all-in-one resource aimed at colleges and universities."--R é sum é de l' é diteur.

Tradecraft is a term used within the intelligence community to describe the methods, practices, and techniques used in espionage and clandestine investigations. Whether the practitioner is a covert agent for the government or an identity thief and con man, the methods, practices, tactics, and techniques are often the same and sometimes learned from the same sources. *Advanced Criminal Investigations and Intelligence Operations: Tradecraft Methods, Practices, Tactics, and Techniques* reveals how intelligence officers and investigators conduct their tradecraft. You'll learn how to plan an operation, how to build an identity and cover story for deep cover operations, and how to detect those who have created false identities for illegal purposes. You'll also get insight into the technical aspects of intelligence (the INTs), counterintelligence, and criminal investigations, and legal considerations for conducting intelligence investigations. Topics include: A discussion of black bag operational planning HUMINT (human intelligence)—the gathering of information from human sources DAME (defenses against methods of entry), forced entry into buildings, safes and combination locks, and automobile locks PSYOPS (psychological operations) and the use of social networks ELINT (electronic intelligence) and SIGINT (signals intelligence)—electronic interception of intelligence, bugs, wiretaps, and other communications interceptions EMINT (emanations intelligence), which concerns the emanation of data, signals, or other intelligence from C4I systems IMINT (imagery intelligence), involving any intelligence gathered using images Intelligence files and analytical methods Based upon the author's training and experience over more than three decades as a law enforcement investigator and military officer, as well as research conducted as an attorney and in academia, the book provides you with an insider perspective on sensitive covert and overt operations and sources. Supplemented with roughly 140 illustrations and photos, this collection of special skills and reference materials is essential to the professional investigator and intelligence operative.

Design practice in offshore geotechnical engineering has grown out of onshore practice, but the two application areas have tended to diverge over the last thirty years, driven partly by the scale of the foundation and anchoring elements used offshore, and partly by fundamental differences in construction and installation techniques. As a consequence offshore geotechnical engineering has grown as a speciality. The structure of *Offshore Geotechnical Engineering* follows a pattern that mimics the flow of a typical offshore project. In the early chapters it provides a brief overview of the marine environment, offshore site investigation techniques and interpretation of soil behaviour. It proceeds to cover geotechnical design of piled foundations, shallow foundations and anchoring systems. Three topics are then covered which require a more multi-disciplinary approach: the design of mobile drilling rigs, pipelines and geohazards. This book serves as a framework for undergraduate and postgraduate courses, and will appeal to professional engineers specialising in the offshore industry.

1955 the author gives corrections for splay foot, back ache, asthma, loss of voice, wry neck, toothache, anemia, writers cramp, tic-doloureux (neuritis, neuralgia) sneezing, sprains, prostate, kidneys, hiccough, hayfever, headache, gall bladder, ear ache.

A wonderful kids coloring book, over 40 large coloring activities with the name of the animal, and the level of details is perfect for kids aged 3-6. All designs are printed on a single side. You would love the quality and how easy it is for preschooler to color. And room to add kids own details. Your review help us to improve.
