This course covers the basic physical geology concepts and skills that are most useful to civil engineers, such as earth materials, tectonics, rock structures and mechanics, topographic maps, fossil fuels, soil and bedrock maps, cross sections, weathering, mass wasting, surface water, groundwater, earthquakes, volcanoes, river and coastal processes.

Geology for Engineers

Geology is the study of earth, the materials of which it is made, the structure of those materials and the effects of the natural forces acting upon them and is important to civil engineering because all work performed by civil engineers involves earth and its features. Fundamental understanding of geology is so important that it is a requirement in university-level civil engineering programs.
