### (PDF) Gold deposit styles and placer gold characterisation

Alluvial or eluvial deposits are the most common type of placer gold, and are often the richest. They contain pieces of gold that have been washed away from the lode by the force of water, and have been deposited in sediment in or near watercourses or former watercourses. Therefore, they are mostly found in valleys or flood plains.

### Placer mining - Wikipedia

Placer mining is an important source of gold, and was the main technique used in the early years of many gold rushes, including the California Gold Rush. ### 101+ Read Book Gold Lacer Deposits In Eastcentral Alaska

Eighty-seven placer districts in Arizona are estimated to have produced a minimum of 564,052 ounces of placer gold from 1774 to 1968. The location, areal extent, past production, mining history, and probable lode source summarized for each district are based on information obtained from a wide variety of published reports relating to placer deposits.

### Placer gold deposits of Arizona

Besides placer deposits of gold, and gold bearing quartz in weathered rock, gold also occurs in quartz veins. The most profitable veins, in the Dahlenega District, occur in the contact zone between mica-schists and granite or diorite.: 59-61. The discovery of gold in the Georgia Gold Belt in 1828 led to the Georgia Gold Rush.
