Ignition Systems: Intro, Types and Electronic Ignition ...

The ignition system is one of the most important systems used in the I.C engines. The spark-ignition engine requires some device to ignite the compressed air-fuel mixture. The ignition takes place inside the cylinder at the end of the compression stroke, the ignition system serves this purpose.

What is an Ignition System? - crankSHIFT

Laser is emerging as a strong concept for alternative ignition in spark ignition engine. Laser ignition has potential advantages over conventional spark plug ignition. Laser ignition system is free from spark electrodes hence there is no loss of spark energy to the electrodes, which are also free from erosion effect.

Engine Ignition System in IC Engine

The classic ignition coil circuit for auto cars or motor bikes. In fact, this is a high tension transformer with a short and thick primary coil and a very long and thin secondary coil. The supply for the primary coil is mostly 6 or 12 volt DC with currents between 3 and 5 Amps.

Blokker I/C ignition

In an internal combustion engine, combustion is a continuous cycle and occurs thousands times in a minute so an effective and accurate source of ignition is required. The idea of spark
