Historically pharmaceutical and fine chemical products have been synthesised using batch methods, but increasingly chemists are looking towards flow chemistry as a greener and more efficient alternative. In flow chemistry reactions are performed in a reactor with the reactants pumped through it. It has the benefit of being easily scaled up and it is straightforward to integrate synthesis, workup and analysis into one system. Flow chemistry is considered a greener alternative to batch chemistry because it is easier to control and minimise hazardous intermediates and by-products. There is significant interest in the use of flow chemistry both in the lab and on an industrial scale. Flow Chemistry provides an update on recent advances that have been made in the field. Particular emphasis is given to the new integrated approaches that bring together several elements to implement flow processes as a regular green chemistry tool for the chemical industries. With chapter contributions from several well-known experts in the field, this book is a valuable resource for researchers working in green chemistry and synthesis, chemical engineers and industrial chemists working in the pharmaceutical and fine chemicals industries.

It is now 10 years since the first edition of Engineering Coatings by Stan Grainger appeared. The success of that edition, and the developments in the area since its publication make this new edition a valuable addition to the literature on the subject. This new edition describes the many methods by which surface coatings or surface modification can be carried out to delay surface degradation and prolong the useful life of engineering components. Since surface technology has advanced in many areas, new techniques such as the newer thermal spray processes and laser surfacing are now covered and the book has been expanded to include more coverage on corrosion. Major changes have also taken place in health and safety legislation, and the sections covering health and safety have been entirely revised as a result. Engineering Coatings with
