A dental implant procedure is performed by inserting artificial tooth roots. These implants bond with your jawbone, allowing the dentist or oral surgeon to place replacement teeth called crowns. Dental implants can be an option if you have one or more missing permanent teeth. They ' re made to look, feel, and function like your natural teeth.

Dental Implant Procedure: Preparation, Recovery, Long-Term ...

A dental implant is a long-term solution for replacing missing teeth. Your dentist places them directly into your jawbone, where they provide an artificial replacement for the root of your missing tooth or teeth. They can support crowns or dentures, in a similar way that roots support natural teeth.
