In stochastic modeling, conditional probabilities are rarely procured via (1.16) but instead are dictated as primary data by the circumstances of the application, and then (1.16) is applied in its equivalent

multiplicative form  $\Pr \{A \cap B\} = \Pr \{A|B\} \Pr \{B\}$  (1.17) to compute other probabilities.

Stochastic processes are ways of quantifying the dynamic relationships of sequences of random events. Stochastic models play an important role in elucidating many areas of the natural and engineering sciences.
