compressor. – Fuel is

then added and

ignited. — The resulting gas spins a turbine, — The turbine powers the compressor. — The gas then exits the engine at the tailpipe.

## **Propulsion (1): Jet Engine Basics**

A jet engine uses the

same scientific principle as a car engine: it burns fuel with air (in a chemical reaction called combustion) to release energy that powers a plane, vehicle, or other machine. But instead of using cylinders that go through four steps in turn, it uses a long metal tube that carries
