The twenty-three articles in this volume are based on papers and posters presented at the Olomouc Linguistics Colloquium (OLINCO) at Palacký University in the Czech Republic in June 7-9, 2018. This conference welcomed papers that combined analyses of language structure with generalizations about language use. The thematic sections are as follows: Part I. Micro-syntax: The Structure and Interpretation of Verb Phrases; Part II. Micro-syntax: Word-Internal Morphosyntax in Nominal Projections; Part III. Macro-syntax: Structure and Interpretation of Discourse Markers and Projections; Part IV: Empirical Approaches to Contrastive Linguistics and Translation Studies. Články v tomto sborníku vycházejí z příspěvků prezentovaných na konferenci Olomouc Linguistics Colloquium (OLINCO), pořádané Univerzitou Palackého v Olomouci ve dnech 7. 6. - 9. 6. 2018. Jako téma byl zvolen "Jazyk jako prostředek a lingvistická struktura", což mělo umožnit prezentaci referátů ze všech současných lingvistických disciplín, pokud se zabývají vědeckým (empirickým, formálním) popisem jazykového systému. Články jsou rozděleny do následujících tematických sekcí: Part I. Micro-syntax: The Structure and Interpretation of Verb Phrases; Part II. Micro-syntax: Word-Internal Morphosyntax in Nominal Projections; Part III. Macro-syntax: Structure and Interpretation of Discourse Markers and Projections; Part IV: Empirical Approaches to Contrastive Linguistics and Translation Studies.

This book is a cross-linguistic study of the syntax of yes-no questions and their answers, drawing on data from a wide range of languages with particular focus on English, Finnish, Swedish, Thai, and Chinese. There are broadly two types of answer to yes-no questions: those that employ particles such as 'yes' and 'no' (as found in English) and those that echo a part of the question, usually the finite verb, with or without negation (as found in Finnish). The latter are uncontroversially derived by ellipsis, while the former have been claimed to be clause substitutes. Anders Holmberg argues instead that even answers

10

that employ particles are complete sentences, derived by ellipsis from full sentential expressions, and that the two types share essential syntactic properties. The book also examines the related cross-linguistic and intralinguistic variation observed in answers to negative questions such as 'does he not drink coffee?', whereby 'yes' in one language appears to correspond to 'no' in another. The book illustrates how a seemingly trivial phenomenon can have the most wide-ranging consequences for theories of language, and will be of interest not only to theoretical linguists but also to students and scholars of typological and descriptive linguistics.

This volume is a collection of previously unpublished articles focusing on the following aspects of Portuguese syntax: clause structure, clitic placement, word order variation, pronominal system, verb movement, quantification, and distribution of particles. The articles are written within the principles and parameters framework and contrast Portuguese with other Romance languages.

This text presents evidence locating adverb phrases in the specifiers of distinct functional projections within a theory of the clause. In this theory, both adverbs and heads, which encode the functional notions of the clause, are ordered in a rigid sequence. The author's proposal suggests that the structure of natural language sentences is much richer than previously assumed.

Offers an explanation for a long-standing question in the typological distinction among languages with respect to formation of interrogatives which use question words such as "who" and "what." Proposes that the availability of question particles and the properties of question words contribute to the typological distinctions found, and argues that the availability of question particles correlates with the

lack of fronting of question words. Of interest to scholars working on interrogatives, syntactic theory, comparative syntax, Chinese syntax, and typology. Annotation copyrighted by Book News, Inc., Portland, OR

This volume contains selected papers from the 1st Forle Conference on Interpreting Studies. The papers seek to take stock of the situation, at the turn of the 21st century, in research, training and the profession.

It is standardly assumed that Universal Grammar (UG) allows a given hierarchical representation to be associated with more than one linear order. This book proposes a restrictive theory of word order and phrase structure that denies this assumption. According to this theory, phrase structure always completely determines linear order, so that if two phrases differ in linear order, they must also differ in hierarchical structure. It is standardly assumed that Universal Grammar (UG) allows a given hierarchical representation to be associated with more than one linear order. For example, English and Japanese phrases consisting of a verb and its complement are thought of as symmetrical to one another, differing only in linear order. The Antisymmetry of Syntax proposes a restrictive theory of word order and phrase structure that denies this assumption. According to this theory, phrase structure always completely determines linear order, so that if two phrases differ in linear order, they must also differ in hierarchical structure. More specifically, Richard Kayne shows that asymmetric c-command invariably maps into linear precedence. From this follows, with few further hypotheses, a highly specific theory of word order in UG: that complement positions must always follow their associated head, and that specifiers and adjoined elements must always precede the phrase that they are sister to. A further result is that standard X-bar theory is not a primitive component of UG. Rather, X-bar theory expresses a set of antisymmetric

10

properties of phrase structure. This antisymmetry is inherited from the more basic antisymmetry of linear order. Linguistic Inquiry Monograph No. 25

The "Going Romance" conferences are a major European annual discussion forum for theoretically relevant research on Romance languages. Selected papers are published in the "Romance Languages and Linguistic Theory" volumes. This is the fourth such volume, containing a selection of the papers that have been presented at the 2002 conference, which was held at the State University of Groningen. The three-day program included a workshop on Acquisition. The articles in this volume focalize on specifics of one or more Romance languages or varieties: clausal structure, verb-movement, topic, focus and reinforcement constructions, nominal ellipsis, (absence of) pronouns in child language, and other current issues in Romance linguistics.

This classic study in theoretical and Chinese syntax has proven influential in recent developments of syntactic theory in areas as diverse as phrase structure, quantifier scope, anaphora, movement constraints, the form and meaning of interrogative sentences, and the nature of Logical Form. Huang gives a detailed analysis of a wide range of grammatical constructions in Chinese (and English) and shows that his analyses shed important new light on the theory of Universal Grammar and linguistic typology, often in ways unavailable from the study of English and other familiar European languages. Some of the results of this work are: (a) a parametric theory of quantifier scope; (b) a relativized notion of a 'governing category' for Chomsky's (1981) binding theory; (c) a theory of generalized control that derives the pro drop parameter and related phenomena; (d) a proposed Condition on Extraction Domains (CED) on overt movement; (e) a proposal of LF wh-movement for languages without wh-movement;

Read PDF La Privacy A Scuola Isuto Comprensivo Statale Vicenza

10

and (f) a generalization of the ECP to account for a full range of adjunct/ complement asymmetries and subject/object asymmetries in syntactic and LF extraction. The proposed analyses exemplify how an optimal theory of typology should come about as the 'by-product' of an optimal theory of UG.

Main Clause Phenomena: New Horizons takes the study of Main Clause Phenomena (MCP) into the 21st century, without neglecting the origins of the topic. It brings together work by both established and up-and-coming scholars, who present analyses for a wide range of MCP, from a variety of languages, with a particular focus on particles and agreement markers, complementizers and verb second, and the licensing of MCP in different types of clauses. Besides enriching the empirical domain, this volume also engages with the theoretical question of how best to capture the distribution of MCP and, in particular, to what extent they are embeddable and why. The diverse patterns and analyses presented challenge the idea that MCP constitute a homogeneous class. Main Clause Phenomena: New Horizons is of interest not just to scholars specializing in the study of MCP, but to all linguists interested in the syntax and/or semantics of the clause.
