A former senior mujahidin figure and an ex-counter-terrorism analyst cooperating to write a book on the history and legacy of Arab-Afghan fighters in Afghanistan is a remarkable and improbable undertaking. Yet this is what Mustafa Hamid, aka Abu Walid al-Masri, and Leah Farrall have achieved with the publication of their ground-breaking work. The result of thousands of hours of discussions over several years, The Arabs at War in Afghanistan offers significant new insights into the history of many of today's militant Salafi groups and movements. By revealing the real origins of the Taliban and al-Qaeda and the jostling among the various jihadi groups, this account not only challenges conventional wisdom, but also raises uncomfortable questions as to how events from this important period have been so badly misconstrued.

Can drinking coffee help people live longer? What makes a stock's price go up? Why did you get the flu? Causal questions like these arise on a regular basis, but most people likely have not thought deeply about how to answer them. This book helps you think about causality in a structured way: What is a cause, what are causes good for, and what is compelling evidence of causality? Author Samantha Kleinberg shows you how to develop a set of tools for thinking more critically about causes. You'll learn how to question claims, identify causes, make decisions based on causal information, and verify causes through further tests. Whether it's figuring out what data you need, or understanding that the way you collect and prepare data affects the conclusions you can draw from it, Why will help you sharpen your causal inference skills.
