Computer Service and Repair presents the most up-to-date information in the rapidly changing world of computers and their software. The text teaches the practices and principles needed to pass the A+ Certification exam, as well as to build, upgrade, and troubleshoot your personal PC. The text is written for students with limited or no PC technical experience as well as for PC technicians with limited formal training. Each chapter covers the latest in hardware and software as well as legacy items that may be found in the field. Chapters cover all the major areas of the PC; an additional three-chapter section is devoted to networking. Laboratories are found in both the text and the Laboratory Manual for the important hands-on training needed for this field. This textbook is an ideal starting point for anyone who wishes to enter the field of PC repair and support.

Over the past 10 years I've constantly seen and met many IT professionals who have all the paper work to be qualified and even years of experience in the field (some even more than me) that simply don't understand how to fix a computer. They simply don't understand how a computer works. IT managers, technicians, students and even worst of all teachers, the same teachers who could be teaching your kids IT, are completely clueless on getting a computer to work as it should. The sad reality is those teachers or managers are the ones the students or interns learn from or look up to and it results in the new generation not being able to accomplish the task they were required to accomplish at their job. It's a process which repeats itself while I write this book and one day I hope this book can help change that, one day I hope this book can help change the world. My name is Brandon Ragoo, and I have been an IT professional for ten years ongoing. I have both the paper work and years experience in the work environment to qualify as a professional, join me while I guide you through the process of repairing any computer within 24 hours.
