Place several science tools on a tray. Give the kids one minute to examine the tray and its contents. Cover the tray with a towel. The students write down as many of the science tools as they can remember. This warm-up activity works well if you're planning an experiment that day. Place the items you'll use in the experiment on the tray.

Science Warm Ups. The very first thing that you will do every day when you walk into class is a science warm up. This will usually be a question that will either get you thinking about what we will be learning that day or will help you think about what we learned during the day before. At the end of the week, we will grade these as a class and hand them in.

books and eye-catching decorations for middle-grade and upper-grade classrooms. This product line is designed by leading educators and features a variety of subjects, including history, fine arts, science, language arts, social studies, government, math, and behavior management.

Even science fair enthusiasts may dread grappling with these two questions: 1. How can you organise many middle school students doing many different projects at the same time? 2. How can you help students while giving them the freedom of choice and independence of thought that come with genuine inquiry? Answer the questions--and face science fairs without fear--with the help of this book from the Science Fair Warm-Up series. This book, for grades 7-10, develops the ideas about practices that students learn in the first book. Students will also find that the two-star problems are much more cognitively demanding. In addition to offering original investigations, the book provides problem-solving exercises to help students develop the inquiry skills to carry the projects through. To save you time, the materials are organised to grow more challenging and encourage independent study as students progress through the grade levels. To help you meet your teaching goals, the series is based on the constructivist view that makes students responsible for their own learning and aligns with national standards and the new Framework for K-12 Science Education. Science Fair Warm-Up will prepare both you and your students for science fair success. But even if you don't have a science fair in your future, the material can help make your students more proficient with scientific research.

Perfect for individual or whole-class instruction, Geography Warm-Ups by Mark Twain includes over 150 warm-ups and covers a variety of topics, including: -U.S. regions -continents -geography overview This middle school geography workbook provides activities to get students ready for the day. This 48-page resource covers the general properties of objects, shape, temperature, density, melting point, elements, and compounds. It includes five warm-ups per reproducible page, answer keys, and suggestions for use.

Many middle school teachers across the United States use student science notebooks as part of their daily classroom instruction. Many others would like to but are not sure exactly how to start. Following his bestselling *Using Science Notebooks in Elementary Classrooms*, Michael Klentschy now examines how the student science notebook can be an invaluable tool at the middle school level. Strategic sentence starters, discussion starters, graphic organizers, and writing scaffolds are included to create or build on existing knowledge. Numerous examples of student work are provided---even an entire notebook entry for one lesson, from making initial predictions to defending conclusions. A discussion of the needs of English learners is also provided, with specific strategies to increase both language fluency and writing proficiency. Scoring guides and other approaches to giving student feedback are included to both underline the importance of feedback and provide some classroom-tested ways to do it.
