school districts. The

researcher sought to determine if there was a statistically significant

difference between the SATP English II scores of two groups of

students (those taught by National Board

difference could be

explained based on

selected teacher

demographic data (sex,

race, highest degree

selected student

demographic data (sex;

indicated that students

who were taught by

National Board

Though previous

other factors such as

gender and attendance

were not significant in

lunch status showed

some significance with

one cohort of third

grade students.

Nevertheless, the

findings from this study

between the state

variables, may provide

useful data to educators

The information

sixth-grade students. A

correlational research design is used to fulfill

the purpose and test the three null hypotheses.

Hypothesis 1 for this study states that there is no relationship between the August 2009 M-CBM scores and the May 2010 mathematics MCT2 scores.

Hypothesis 2 states that there is no relationship

scores. Hypothesis 3

states that there is no

scores and the May

2010 mathematics

MCT2 scores. To test

the three null

hypotheses, correlation

coefficients were

computed using the  
Pearson  $r$ . The results  
from all three

hypotheses indicated

that there were moderate  
positive correlations

between scores of the M-  
CBM and scores of the

mathematics portion of  
the MCT2, with the

strongest relationship

being between the April

M-CBM and the

mathematics MCT2

was done to determine if  
the relationship between

M-CBM and

results of this analysis

indicated that

relationships between M-
