Multivariable Calculus deals with the functions of multiple variables, whereas single variable calculus deals with the function of one variable. The differentiation and integration process are similar to the single variable calculus. In multivariable calculus, to find a partial derivative, first, take the derivative of the appropriate variable while holding the other variables as constant. It ...

But the approach is different unlike single variable calculus. In multivariable limits, we check for the value of the limit as the
function approaches the desired values from different paths. For a multivariable limit to exist, the function should approach the
same value regardless of the path taken to approach the point, which means an infinite number of paths need to be checked.
For example ...

~~Multivariable Calculus 6th Edition~~

Multivariable calculus is used in many fields of natural and social science and engineering to model and study high-dimensional
systems that exhibit deterministic behavior. In economics, for example, consumer choice over a variety of goods, and producer
choice over various inputs to use and outputs to produce, are modeled with multivariate calculus. Quantitative analysts in
finance also often ...

give an answer that is symmetric in a and b — consider swapping the variables x and y . Further, if an integral represents a probability then it should take a value between 0 and 1. An integral representing a mass should be positive. Etc. Example 6 Take $R = [0, 2] \times [1, 3]$ and evaluate $I = \iint_R (x + y^2) dx dy$. Solution. We compute (first integrating with ...
