Since the publication of the first edition, the U.S. Surgeon General released the first-ever report on bone health and osteoporosis in October 2004. This report focuses even more attention on the devastating impact osteoporosis has on millions of lives. According to the National Osteoporosis Foundation, 2 million American men have osteoporosis, and another 12 million are at risk for this disease. Yet despite the large number of men affected, the lack of awareness by doctors and their patients puts men at a higher risk that the condition may go undiagnosed and untreated. It is estimated that one-fifth to one-third of all hip fractures occur in men. This second edition brings on board John Bilezikian and Dirk Vanderschueren as editors with Eric Orwoll. The table of contents is more than doubling with 58 planned chapters. The format is larger — 8.5 x 11. This edition of Osteoporosis in Men brings together even more eminent investigators and clinicians to interpret developments in this growing field, and describe state-of-the-art research as well as practical approaches to diagnosis, prevention and therapy. This first-ever Surgeon General's Report on bone health and osteoporosis illustrates the large burden that bone disease places on our Nation and its citizens. Like other chronic diseases that disproportionately affect the elderly, the prevalence of bone disease and fractures is projected to increase markedly as the population ages. If these predictions come true, bone disease and fractures will have a tremendous negative impact on the future well-being of Americans. But as this report makes clear, they need not come true: by working together we can change the picture of aging in America. Osteoporosis, fractures, and other chronic diseases no longer should be thought of as an inevitable part of growing old. By focusing on prevention and lifestyle changes, including physical activity and nutrition, as well as early diagnosis and appropriate treatment, Americans can avoid much of the damaging impact of bone disease and other chronic diseases. This Surgeon General's Report brings together for the first time the scientific evidence related to the prevention, assessment, diagnosis, and treatment of bone disease. More importantly, it provides a framework for moving forward. The report will be another effective tool in educating Americans about how they can promote bone health throughout their lives. This first-ever Surgeon General's Report on bone health and osteoporosis provides much needed information on bone health, an often overlooked aspect of physical health. This report follows in the tradition of previous Surgeon Generals' reports by identifying the relevant scientific data, rigorously evaluating and summarizing the evidence, and determining conclusions.

Providing a comprehensive review of short-and long-term adverse events of both antiresorptive and anabolic drugs, this practical guide updates the clinician on the pathophysiology of osteoporosis and the principles behind our present and future pharmaceuticals. Leading practitioners in the field examine all current literature and data regarding the duration and safety of these therapies, with recommendations for clinicians on decision-making and best practices for osteoporosis patients. An overview of the pathophysiology and epidemiology of osteoporosis and discussion of both anabolic and antiresorptive drugs is followed by fracture risk assessment and an examination of treatment failures. Next, a number of chapters are dedicated to the diagnosis, presentation and management of atypical femur fractures and osteonecrosis of the jaw (ONJ), each of which are significant patient concerns when using these osteoporosis treatments. The introduction and utilization of drug holidays is also discussed, as well as the long-term outlook for management of osteoporotic patients. Written and edited by experts in the field, The Duration and Safety of Osteoporosis Treatment is a balanced resource for researchers, practitioners and policy-makers alike for clinical decision-making and patient care.
