There are over 200 known types of zoonoses. Zoonoses comprise a large percentage of new and existing diseases in humans. Some zoonoses, such as rabies, are 100% preventable through vaccination and other methods. A zoonosis is an infectious disease that has jumped from a non-human animal to humans. Zoonotic pathogens may be bacterial, viral or parasitic, or may involve unconventional agents and can spread to humans through direct contact or through food, water or the environment.

### Zoonoses - World Health Organization

A zoonosis (plural zoonoses, or zoonotic diseases) is an infectious disease caused by a pathogen (an infectious agent, such as a bacterium, virus, parasite or prion) that has jumped from a non-human animal (usually a vertebrate) to a human. Typically, the first infected human transmits the infectious agent to at least one other human, who, in turn, infects others.

### Zoonosis - Wikipedia

Sometimes people with zoonotic infections can be very sick but some people have no symptoms and do not ever get sick. Other people may have symptoms such as diarrhea, muscle aches, and fever. Foods can be the source for some zoonotic infection when animals such as cows and pigs are infected with parasites such as Cryptosporidium or Trichinella. People can acquire cryptosporidiosis if they accidentally swallow food or water that is contaminated by stool from infected animals.

### CDC - Parasites - Animals (Zoonotic)

Tapeworms also are considered to be a zoonotic parasite. However, they are typically not passed directly from pets to people, even though dogs and cats are commonly infected with them. To infect a dog or cat, tapeworms require an intermediate host, which is usually a flea or a small prey animal that is ingested.

### Which Intestinal Parasites Are Zoonotic?

More than 15 protozoa and 50 other parasitic diseases are zoonotic in nature and all these diseases have been discussed in detail. The first chapter is concerned with classification of zoonotic parasites, food borne, vector borne and occupation related zoonotic parasites.

### Parasitic Zoonoses | B B Singh Dhaliwal | Springer

Zoonotic Parasites Toxoplasmosis. Toxoplasmosis is a disease caused by the toxoplasma, a zoonotic parasite that lives in the intestines of... Roundworms. Roundworms live in the intestines of dogs and cats. When an infected animal has a bowel movement, thousands... Tapeworms. Tapeworms are another ...

### Zoonotic Parasites | Pet Health Safety TexVetPets

Zoonotic parasites move between animals and people, and in some cases cause significant veterinary, medical and/or public health problems. Such parasites may be more prevalent in areas where veterinary and medical services are scarce, and especially if sanitation infrastructure is suboptimal.

### **(PDF) Parasitic zoonoses in India: An overview**

Parasitic zoonoses (PZs) pose a significant but often neglected threat to public health, especially in developing countries. In order to obtain a better understanding of their health impact, summary measures of population health may be calculated, such as the Disability-Adjusted Life Year (DALY).

### **The Burden of Parasitic Zoonoses in Nepal: A Systematic Review**

Parasitic zoonoses affect both human and animal populations and often exhibit complex life-cycle patterns, thus the transmission ecology becomes important for understanding epidemiology and in consideration of control interventions.

### **Transmission and control of parasitic zoonoses ...**

Parasitic zoonoses are defined as infections caused by protozoa, helminths and arthropods which are naturally transmitted between vertebrate animals and man. Certain parasitic zoonoses represent a serious threat to humans and are responsible for substantial losses in animal production, like echinococcosis and taeniosis/cysticercosis.
