Support for parents. As a parent, you may feel angry, worried, upset or afraid if you discover your child has been a victim or witness of crime. You may not have realised something had happened, and finding out your child has been affected by crime can be shocking and difficult to understand. Just like young people, it's important for parents to be able to share their concerns and fears too.

All families change over time. Sometimes a baby is born, or a grown-up gets married. And sometimes a child gets a new foster parent or a new adopted mom or dad. Children need to know that when this happens, it's not their fault. They need to understand that they can remember and value their birth family and love their new family, too. Straightforward words and full-color illustrations offer hope and support for children facing or experiencing change. Includes resources and information for birth parents, foster parents, social workers, counselors, and teachers.

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is

meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Parents and Families of Students With Special Needs: Collaborating Across the Age Span teaches students the skills they need to effectively collaborate with parents and families to ensure a child's success in the classroom. Authors Vicki A. McGinley and Melina Alexander's text takes a lifespan approach with a special emphasis on the critical transition points in a child's life. Information is provided on what can be seen at each stage of an individual with disabilities' development, and addresses concerns and needs that families may have during these unique phases of growth. Chapters written by professors and professionals who are also parents of students with special needs bring a diverse range of voices into the narrative. The authors provide an in-depth discussion of how parents and families are affected by particular disabilities, family system theory, the laws that affect individuals with disabilities, and assessments for individuals with disabilities.

Provides an expert view of research on parenting and child development in new family forms.

Parents of children with disabilities confront a number of challenges and may be at risk for depressive or trauma-related symptoms. Changes in family roles and routines can cause stress for parents, siblings, and extended family alike as they confront multiple issues, including behavioural problems and frequent healthcare needs. Despite such challenges, many families derive a sense of meaning from facing their difficulties in a positive way. This book surveys the most recent empirical research on families of children with disabilities and provides guidelines and strategies for the developmental and family psychologists who support these clients. The book follows a developmental progression, first examining the immediate effects that a child's disability can have on his or her family and looking at the changes that occur as the child grows and faces new challenges. In doing so, the author examines studies employing a variety of methodologies, including quantitative research, meta-analyses, and qualitative methods such as narrative analysis. The book also describes cognitive behavioural interventions and programs that train parents to more effectively manage child behavioural problems and thereby improve family well-being.

Explores the effects of divorce on children and their parents.

In Fixing Families, Jennifer Reich takes us inside Child Protective Services for an in-depth look at the entire organization. Following families from the beginning of a case to its discharge, Reich shows how parents negotiate with the state for custody of their children, and how being held accountable to the state affects a family.

"Epic Families not only identifies a problem within today's church but presents suggestions that equip parents to raise kids who are passionate for Jesus and offers ways that churches can partner with and empower parents in this mission. Definitely well worth the read!" - Rev. Allen Perdue Lead Pastor, Jersey Life Church Today's children are not raised in a bubble. Daily, they are bombarded with worldly wisdom and are tempted at earlier ages with things that would have stunned parents of previous generations. Epic Families strives to help parents reclaim their

God-given mandate to raise their children to know and love Him. Developed through more than a decade of ministry experience as well as one-on-one coaching with parents and church staff, this book identifies ways that the church has taken over a role that was designed for parents. It offers suggestions to parents to help them confidently teach their children about the God who made them, loves them, and wants a relationship with them, while also suggesting ways that churches can partner with parents, while not usurping the parents' role. Epic Families can empower parents to inspire their children to trust God and make wise choices. In the busy and sometimes scary world we live in, parents need to intentionally showcase God's presence to their children and let Him permeate their lives; this book offers them a valuable resource to do that.

As the parent of an only child, are you frustrated because you find yourself overindulging and overcompensating? Do you treat your child like an adult, overpraise, or overprotect him? Have you expected perfection from your child yet failed to make rules and implement them consistently? If you are not a perfect parent of an only child, you are not alone. Based on the real-life experiences of Carolyn White—editor of *Only Child*, parent, and educator—and hundreds of interviews with only children and parents of only children, *The Seven Common Sins of Parenting an Only Child* celebrates the special rewards and opportunities of the single-child family and offers a practical (and often humorous) guide for overcoming the most common errors parents can make when rearing an only child.
