The book examines the conceptual, economic, and fiscal impact(s) of the Social Protection Floor (SPF) initiative of the International Labor Organisation (ILO) and other policy influencers by first critically examining the methodologies used by the international agencies to estimate the fiscal costs of designated minimum package(s) of social protection programs. The book also briefly reviews the methodologies used and usefulness of the Social Protection Index (SPI) of the Asian Development Bank (ADB). Second, the book analyses strategies and specific initiatives used by the selected East Asian countries (China, India, Indonesia, the Philippines, Thailand, and Vietnam), designed to progress towards the social protection goals underlying the Social Development Goals (SDGs) adopted by the United Nations in September 2015, and endorsed by the countries covered in this book. Finally, the book provides a framework for generating fiscal space to fund the social protection programs and initiatives. The country chapters utilise this framework in the context of each specific country to suggest generating fiscal space.

Landslides and Engineered Slopes. Experience, Theory and Practice contains the invited lectures and all papers presented at the 12th International Symposium on Landslides, (Naples, Italy, 12-19 June 2016). The book aims to emphasize the relationship between landslides and other natural hazards. Hence, three of the main sessions focus on Volcanic-induced landslides, Earthquake-induced landslides and Weather-induced landslides respectively, while the fourth main session deals with Human-induced landslides.

Some papers presented in a special session devoted to "Subareal and submarine landslide processes and hazard" and in a "Young Session" complete the books. *Landslides and Engineered Slopes. Experience, Theory and Practice* underlines the importance of the classic approach of modern science, which moves from experience to theory, as the basic instrument to study landslides. Experience is the key to understand the natural phenomena focusing on all the factors that play a major role. Theory is the instrument to manage the data provided by experience following a mathematical approach; this allows not only to clarify the nature and the deep causes of phenomena but mostly, to predict future and, if required, manage similar events. Practical benefits from the results of theory to protect people and man-made works. *Landslides and Engineered Slopes. Experience, Theory and Practice* is useful to scientists and practitioners working in the areas of rock and soil mechanics, geotechnical engineering, engineering geology and geology.

The field of occupational health and safety constantly changes, especially as it pertains to biomedical research. New infectious hazards are of particular importance at nonhuman-primate facilities. For example, the discovery that B virus can be transmitted via a splash on a mucous membrane raises new concerns that must be addressed, as does the discovery of the Reston strain of Ebola virus in import quarantine facilities in the U.S. The risk of such infectious hazards is best managed through a flexible and comprehensive Occupational Health and Safety Program (OHSP) that can identify and mitigate potential hazards. *Occupational Health and Safety in the Care and Use of Nonhuman Primates* is intended as a reference for vivarium managers, veterinarians, researchers, safety professionals, and others who are involved in developing or implementing an OHSP that deals with nonhuman primates. The book lists the important features of an OHSP and provides the tools necessary for informed decision-

making in developing an optimal program that meets all particular institutional needs.

The book is concerned with strategy and tactics for directing that small slice of world income into filling the gap. This must be done country by country, on the initiative of each country's government: with the maximum involvement of its own civil society, and with the rich world also making a contribution. To add momentum, the international community needs to adopt targets far more specific than the fifty percent extreme 'poverty reduction' of the first Millennium Development Goal.

Developers (DVP) whose projects adversely affect WL must, as prescribed in reg's. & guidance issued by the Army Corps of Eng. & the EPA, first avoid & then minimize adverse impacts to WL. When adverse impacts are unavoidable, the DVP is required to compensate by restoring a former WL, enhancing a degraded WL, creating a new WL, or preserving an existing WL. One method of mitigation is for DVP to pay fees to public entities or private non-profit natural resources mgmt. org's. that use them to establish WL (known as in-lieu-fee (ILF) org's.). This report examines the increased use of the ILF mitigation option, & also addresses the use of ad hoc arrang. as a mitigation option. Illus.
