Renal - WordPress.com

When renal function is impaired, dose adjustments or avoidances are necessary for renally excreted medications to prevent or minimise medication errors.³
4 Also, the appropriate adjustment of medication dosage according to kidney function can optimise therapeutic efficacy.⁵ Previous studies showed that poor renal function was one of the risk factors for medication-related hospital admission.⁴ 6 Thus, consideration of renal function is important in using medications at safe and effective doses.⁷

Evaluation of medication dose adjustments in patients with ...

Dosage adjustments based on degree of renal function; Atorvastatin (Lipitor) 10 mg daily Maximal dosage: 80 mg daily. No adjustment needed. Fluvastatin (Lescol)

Drug Dosing Adjustments in Patients with Chronic Kidney ...

Conclusion. Enoxaparin 1 mg/kg once every 24 hours in patients with stage 4 or 5 chronic kidney disease who required full anticoagulation was safe, and this dose did not exceed recommended concentrations. The significance of enoxaparin trough levels remains unclear and should be investigated in future studies.
