SMAW: A welder's guide - The FABRICATOR

SMAW welding is a process which uses a consumable electrode which is covered with a flux. The welding machine is hooked up to a power source, which creates either alternating current (AC) or direct current (DC) to form an arc between the electrode and the metal. As this arc forms, both the electrode and the metal melt, forming a molten puddle known as the weld pool.

The SMAW welding process is one of the most common and oldest processes in arc welding, dating back to the 1890s. The SMAW welding process is commonly used for: Shipbuilding. Underwater welding. Construction. Farm machinery. Pipelines. The SMAW arc welding process has some irrevocable advantages: Good for working outdoors. Basic, easily portable equipment. Can be used on a variety of metals of different thickness. SMAW Welding Techniques

Setting the amperage on a welding machine, whether Stick (SMAW), MIG (GMAW) (*typically uses voltage setting), or TIG (GTAW), depends on some key variables such as application and base material, welding process, and electrode. Once you determine these three main variables, you can set your welding machine and start laying a weld bead.

Guidelines For Shielded Metal Arc Welding (SMAW)

Arc welding (short for Manual Metal Arc (MMA) welding and also known as Stick and SMAW) is a very involved subject and we only cover enough to get you up to speed. There are many books on the subject, and more detailed information can be found elsewhere on the internet. Also we have a very friendly forum that can help.

SMAW and GMAW. Welding is one of the most reliable and fastest joining techniques to join and assemble metals, plastics, and ceramics permanently without the application of heat, filler, and pressure. Although there is large number of welding processes available, you can classify it into two major parts; one is fusion welding, and the other is solid-state welding.

The welding inverter power source selected should have sufficient power to melt the electrode and weld material with enough capacity to maintain the arc voltage. The MMA (Stick) welding process typically requires high current (50-350 Amps) at relatively low voltage (10-50 Volts).

There are many different types of electrodes used in the shielded metal arc welding, (SMAW) process. The intent of this guide is to help with the identification and selection of these electrodes.

Basic Guide of ARC Welding Electrodes | MetalWebNews.com

DEFINITION AND GENERAL DESCRIPTION Shielded Metal Arc Welding (SMAW) is an arc welding process in which coalescence of metals is produced by heat from an electric arc that is maintained between the tip of a consumable covered electrode and the surface of the base metal in the joint being welded.
