Brain Differences Between Genders | Psychology Today

Male and female brain anatomy. Males and females differ in some aspects of their brains, notably the overall difference in size, with men having larger brains on average (between 8% and 13% larger when not corrected for body size), but there are areas of the brain that appear not to be sexually differentiated. Additionally, there are differences in activation patterns that suggest anatomical or developmental differences, but the source of these differences is often unclear.
