The Mars Project is a technical specification for a human mission to Mars that von Braun wrote in 1948, with a provisional launch date of 1965. He envisioned an "enormous scientific expedition" involving a fleet of ten spacecraft with 70 crew members that would spend 443 days on the surface of Mars before returning to Earth.

MARS Project | Saving limbs, saving lives across Manchester
It was the largest and fiercest warship in the world, named Mars after the Roman god of war. But it went up in a ball of flames during a brutal naval battle in 1564, consigning more than 800 Swedish and German sailors and a fortune in gold and silver coins to the bottom of the Baltic Sea. Join our journey to the bottom of the sea.

The Mars Project by Wernher von Braun - goodreads.com
"The Mars Project is timely... von Braun's views, seen today against the debate over the role of the shuttle, the development of Space Station Freedom, and the proposal to land Earthlings on Mars early in the next century, raise questions that we still seek to answer."-Janelle Warren-Findley, co-editor of A Documentary History of the Space Age

Mars One aims to establish a permanent human settlement on Mars. Several unmanned missions will be completed, establishing a habitable settlement before carefully selected and trained crews will depart to Mars. Funding and implementing this plan will not be easy, it will be hard. The Mars One team, with its advisers and with established aerospace companies, will evaluate and mitigate risks and identify and overcome difficulties step by step.

The Mars One Foundation, based in the Netherlands, managed the project. The small organization had four employees, and intended to make profits by selling media (documentaries) about the personnel selection, training and colonization. The first mission was estimated by its CEO Bas Lansdorp to cost about 6 billion dollars as of the 2010s.

fiction by most of those who considered it at all. Here the German-born scientist Wernher von Braun detailed what he believed were the problems and possibilities inherent in a projected expedition to Mars. Today von Braun is recognized as the person most responsible for laying the groundwork for public acceptance of America's space program. When President Bush directed NASA in 1989 to prepare plans for an orbiting space station, lunar research bases, and human exploration of Mars, he was largely echoing what von Braun proposed in *The Mars Project*.

respected advocate for space colonization outlines a plan for taking humans to Mars within the next quarter century, posing business-specific arguments while outlining practical strategies for travel and planetary homesteading.

Within the Office of Space Science of the National Aeronautics and Space Administration (NASA) special importance is attached to exploration of the planet Mars, because it is the most like Earth of the planets in the solar system and the place where the first detection of extraterrestrial life seems most likely to be made. The failures in 1999 of two NASA missions-Mars Climate Orbiter and Mars Polar Lander-caused the space agency's program of Mars exploration to be systematically rethought, both

technologically and scientifically. A new Mars Exploration Program plan (summarized in Appendix A) was announced in October 2000. The Committee on Planetary and Lunar Exploration (COMPLEX), a standing committee of the Space Studies Board of the National Research Council, was asked to examine the scientific content of this new program. This goals of this report are the following: -Review the state of knowledge of the planet Mars, with special emphasis on findings of the most recent Mars missions and related research activities; -Review the most important Mars research opportunities in the immediate future; -Review scientific priorities for the exploration of Mars identified by COMPLEX (and other scientific advisory groups) and their motivation, and consider the degree to which recent

discoveries suggest a reordering of priorities; and -Assess the congruence between NASA's evolving Mars Exploration Program plan and these recommended priorities, and suggest any adjustments that might be warranted.

This never-before-printed science fiction novel by the original 'rocket man', Dr Wernher von Braun, combines technical fact with a human story line in the way that only a true dreamer can realise. Written more than half a century ago, this enthusiastic tale of human space exploration, based on detailed and accurate science, has lingered unpublished in von Brauns personal files until now, nearly 30 years after his death and 57 years after it was written. This exclusive von Braun treasure comes complete with an appendix of his

original calculations and technical drawings, made in the late 1940s, on which the story's journey is based. This novel takes the reader through the entire adventure -- the planning for a Mars mission, the building of the mighty space ships, the long journey, the amazing discoveries made on Mars, and the return home. Gary Holt, former Chief Instructor of Rocket Pilots for the US Space Force, leads a 10-ship multinational team to Mars -- a Mars with one surprising difference from our Mars! -- and after spending months exploring the red planet, brings his mission home a complete success. The author's detailed attention to the actions and feelings of the characters -- both those who went and those who stayed behind -- makes this an adventure of human proportions, rather than merely another fanciful tale.

Curator and space historian at the Smithsonian's National Air and Space Museum delivers a brilliantly nuanced biography of controversial space pioneer Wernher von Braun. Chief rocket engineer of the Third Reich and one of the fathers of the U.S. space program, Wernher von Braun is a source of consistent fascination. Glorified as a visionary and vilified as a war criminal, he was a man of profound moral complexities, whose intelligence and charisma were coupled with an enormous and, some would say, blinding ambition. Based on new sources, Neufeld's biography delivers a meticulously researched and authoritative portrait of the creator of the V-2 rocket and his times, detailing how he was a man caught between morality and progress, between his

dreams of the heavens and the earthbound realities of his life.

Written by veteran aerospace journalist Bob Ward, who spent years investigating his subject, this biography presents a revealing but even-handed portrait of the father of modern rocketry. As he chronicles Wernher von Braun's life, Ward explodes many myths and misconceptions about the controversial genius who was a hero to some, a villain to others. The picture of von Braun that emerges is of a brilliant scientist with limitless curiosity and a drive to achieve his goals at almost any price from, developing the world's first ballistic missile used against the Allies in World War II to helping launch the first U.S. satellite that hurled Americans

into space and the Saturn V super-booster that powered them to the moon. Along the way readers are introduced to the human side of this charismatic visionary who brought the United States into the Space Age.

Since the beginning of human history Mars has been an alluring dream; the stuff of legends, gods, and mystery. The planet most like ours, it has still been thought impossible to reach, let alone explore and inhabit. Now with the advent of a revolutionary new plan, all this has changed. Leading space exploration authority Robert Zubrin has crafted a daring new blueprint, Mars Direct, presented here with illustrations, photographs, and engaging anecdotes. The Case for Mars is not a vision for the far future or one that will cost us

impossible billions. It explains step-by-step how we can use present-day technology to send humans to Mars within ten years; actually produce fuel and oxygen on the planet's surface with Martian natural resources; how we can build bases and settlements; and how we can one day "terraform" Mars; a process that can alter the atmosphere of planets and pave the way for sustainable life.
