receptivity reflected in the policy declarations of many governments was sparked by a wave of private initiatives led by former senior policy leaders in many countries. This book examines practical steps for achieving progress toward disarmament, realistically assessing both challenges and opportunities associated with achieving a world without nuclear weapons. The book places the current debate over nuclear abolition in the context of urgent non-proliferation priorities and the need to prevent nuclear weapons from falling into the hands of extremist regimes and terrorists. It examines the reasons why more than two dozen states have given up

nuclear programs over the years and distils lessons from the end of the cold war to offer policy recommendations for moving toward lessened global reliance on nuclear weapons. Also included are in-depth analyses of proliferation challenges and disarmament opportunities in North Korea and Iran. The book concludes with a detailed roadmap for moving progressively toward global nuclear zero. It proposes a new international security regime based on shared missile defences, nonweaponized deterrence and greater efforts to enhance transnational cooperation.

In 2007 two former U.S.

secretaries of state, a defense secretary, and a former senator wrote persuasively in the Wall Street Journal that the time had come to move seriously toward a nuclear-free world. Almost two years later, the Global Zero movement was born with its chief aim to rid the world of such weapons once and for all by 2030. But is it realistic or even wise to envision a world without nuclear weapons? More and more people seem to think so. Barack Obama has declared “America’s commitment to seek the peace and security of a world without nuclear weapons.” But that is easier said than done. Michael O’Hanlon places his own indelible stamp on this critical issue, putting forth a “friendly skeptic’s

case for nuclear disarmament.” Calls to “ban the bomb” are as old as the bomb itself, but the pace and organization of nonproliferation campaigns have picked up greatly recently. The growing Global Zero movement, for example, wants treaty negotiations to begin in 2019. Would this be prudent or even feasible in a world that remains dangerous, divided, and unpredictable? After all, America’s nuclear arsenal has been its military trump card for much of the period since World War II. Pursuing a nuclear weapons ban prematurely or carelessly could alarm allies, leading them to consider building their own weapons—the opposite of the intended effect. O’Hanlon

clearly presents the dangers of nuclear weapons and the advantages of disarmament as a goal. But even once an accord is in place, he notes, temporary suspension of restrictions may be necessary in response to urgent threats such as nuclear “cheating” or discovery of an advanced biological weapons program. To take all nuclear options off the table forever strengthens the hand of those that either do not make that pledge or do not honor it. For the near term, traditional approaches to arms control, including dismantling existing bomb inventories, can pave the way to make a true nonproliferation regime possible in the decades ahead.

Nuclear disarmament is firmly back on the international agenda. But almost all current thinking on the subject is focused on the process of reducing the number of weapons from thousands to hundreds. This rigorous analysis examines the challenges that exist to abolishing nuclear weapons completely, and suggests what can be done now to start overcoming them. The paper argues that the difficulties of 'getting to zero' must not preclude many steps being taken in that direction. It thus begins by examining steps that nuclear-armed states could take in cooperation with others to move towards a world in which the task of prohibiting nuclear weapons

could be realistically envisaged. The remainder of the paper focuses on the more distant prospect of prohibiting nuclear weapons, beginning with the challenge of verifying the transition from low numbers to zero. It moves on to examine how the civilian nuclear industry could be managed in a nuclear-weapons-free world so as to prevent rearmament. The paper then considers what political-security conditions would be required to make a nuclear-weapons ban enforceable and explores how enforcement might work in practice. Finally, it addresses the latent capability to produce nuclear weapons that would inevitably exist after abolition, and asks whether this is

A vigorous debate is occurring among American elites with respect to whether and when the United States should relinquish its nuclear weapons. Bolstering hopes for tangible results is that a U.S. President is again publicly and forcefully supporting disarmament. While this debate, which addresses both technical and political factors related to abolition, may be the most serious one of its kind since the dawn of the nuclear age, the future of U.S. nuclear weapons policy remains uncertain. The general approach advanced today

in U.S. policy circles largely hews, after all, to the logic of the past 65 years: arms control and nonproliferation now, disarmament at an undetermined time in the future. Moreover, several conceptual and strategic barriers continue to block serious progress toward U.S. disarmament. By situating the current pro-disarmament rhetoric in this larger historical and strategic context, this monograph argues that there is reason to doubt whether the current push for disarmament will produce meaningful and lasting results.
