

Viscoelastics In Ophthalmic Surgery

Eventually, you will completely discover a additional experience and capability by spending more cash. nevertheless when? do you allow that you require to get those all needs like having significantly cash? Why don't you attempt to acquire something basic in the beginning? That's something that will guide you to comprehend even more approximately the globe, experience, some places, similar to history, amusement, and a lot more?

It is your completely own time to play a role reviewing habit. in the middle of guides you could enjoy now is viscoelastics in ophthalmic surgery below.

Viscoelastics in Ophthalmic Surgery is a comprehensive and detailed text on all aspects of viscoelastic use in ophthalmology. The authors describe viscoelastics as a "surgical instrument," and within the text, they describe the various formulations of viscoelastics and their potential use in ophthalmic surgery.

HumanOptics offers various viscoelastic solutions for use in ophthalmic anterior segment surgery. These are an important component of successful eye surgery. Our viscoelastic solutions offer efficient, reliable support to ophthalmic surgeons during phacoemulsification and implantation of the IOL. Depending on the product category, the focus is on the stability of the anterior chamber or endothelial cell protection (dispersive and cohesive viscoelastics).

The term viscosurgery was introduced almost 30 years ago. The development of the first viscoelastic agent which was made of sodium hyaluronate [Healon□□] helped to revolutionize the way cataract surgery was performed. Many other hyaluronates followed, differing from one another in molecular weight, concentration, and viscosity.

Viscoelastics, also referred to as OVDs (ophthalmic visco-surgical devices), are viscous substances that allow us to make phaco-emulsification easier and safer. While there are many viscoelastics available on the market, there are two main classes: dispersive and cohesive. What are the differences and when do you use each?

Within just a few years this group of substances has enlarged the field of ophthalmic surgery enormously. Many procedures have become safer and simpler and other techniques could only be developed because of the availability of visco elastics. Especially cataract surgery and implantation of intraocular lenses have benefitted.
