This book provides an up-to-date description of road maintenance management. Written primarily from a management perspective, it provides new insights into the relationship between the various functions involved in managing a modern road network. It has been developed based on the experience of project work in this field carried out in a number of countries. The text provides a framework for considering aspects of management, such as policy formulation, network considerations, staff responsibilities, level of data detail, cost estimating methods, and others, that relate to four basic management functions: planning, programming, preparation, and operations.

This book comprises refereed papers from the 10th World Congress on Engineering Asset Management (WCEAM 2015), held in Tampere, Finland in September 2015. These proceedings include a compilation of state-of-the-art papers covering a comprehensive range of subjects equally relevant to business managers and engineering professionals alike. With a focus on various aspects of engineering asset management ranging from strategic level issues to detail-level machine health issues, these papers address both industry and public sector concerns and issues, as well as advanced academic research. Proceedings of the WCEAM 2015 is an excellent reference and resource for asset management practitioners, researchers and academics, as well as undergraduate and postgraduate students at tertiary institutions or in the industry.

With its easy-to-read writing style, Productivity and Reliability-Based Maintenance Management provides a strong yet practical foundation on Total Productive Maintenance (TPM). This comprehensive practical guide departs from the wait-failure-emergency repair cycle that plagues many industries today. Instead, this text takes a proactive and productive maintenance approach, focusing on how to avoid failure in the first place. By using real-world case studies in every chapter, the author reinforces the importance of sound and proactive maintenance practices. The use of end-of-chapter problems and discussion questions helps to solidify concepts presented. Productivity and Reliability-Based Maintenance Management is a powerful educational tool for students as well as maintenance professionals and managers. This volume was previously published under the same title in 2004 by Pearson Education, and has been reprinted with permission through an arrangement with the author.

In order to satisfy the needs of their customers, network utilities require specially developed maintenance management capabilities. Maintenance Management information systems are essential to ensure control, gain knowledge and improve decision making in companies dealing with network infrastructure, such as distribution of gas, water, electricity and telecommunications. Maintenance Management in Network Utilities studies specified characteristics of maintenance management in this sector to offer a practical approach to defining and implementing the best management practices and suitable frameworks. Divided into three major sections, Maintenance Management in Network Utilities defines a series of stages which can be followed to manage maintenance frameworks properly. Different case studies provide detailed descriptions which illustrate the experience in real company situations. An introduction to the concepts is followed by main sections including: A Literature Review, covering the basic concepts and models needed for framework design, development and implementation. Framework Design and Definition, developing the basic pillars of network utilities maintenance management framework. Performance Evaluation & Maturity, focusing on the reliability concept and maturity models from different viewpoints. By establishing basic foundations for creating and maintaining maintenance managements strategies, Maintenance Management in Network Utilities acts a practical handbook for all professionals in these companies and across areas such as network development, operations management and marketing.

For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce.

This book constitutes the refereed post-proceedings of the 11th IFIP WG 5.1 International Conference on Product Lifecycle Management, PLM 2014, held in Yokohama, Japan, in July 2014. The 51 full papers presented were carefully reviewed and selected from 77 submissions. They are organized in the following topical sections: BIM operations, maintenance, and renovation; BIM concepts and lifecycle management; design and education; naval engineering and shipbuilding; aeronautical and automotive engineering; industry and consumer products; interoperability, integration, configuration, systems engineering, change management and maturity; knowledge engineering, knowledge management, service and manufacturing; and new PLM.

The OECD's Base Erosion and Profit Shifting (BEPS) project promises to make effective inroads into the much criticized corporate tax strategy known as aggressive transfer pricing, whereby the profitability of subsidiaries in different jurisdictions is "managed" via mispricing with the intent of minimizing the corporation's overall tax burden. Although the OECD BEPS project is an ongoing endeavor, its accomplishments to date and developing trends are discernible. This book, including contributions by outstanding and renowned transfer pricing experts both from practice and academia, analyses these trends, and proposes reforms which would ensure that transfer pricing outcomes are better aligned with economic activities and value creation, which achieves a more equitable distribution of profits among different countries. Each chapter is dedicated to specific sections of the OECD's BEPS Action Plan. Among the topics and issues covered are the following: - arm's length principle and its ongoing development; - allocation of risk and recharacterization; - intangibles (both license model and cost contribution arrangements); - interest deductions and intra-group financing; - low value-adding services; - commissionaire arrangements and low-risk distributors; - attribution of profits to permanent establishments; - documentation requirements (including Country-by-Country Reporting). Within these topics, measures to identify the commercial and financial relationships inside multinational enterprises, to accurately delineate actual transactions, as well as guidance on defining risk and its allocation among entities of a multinational enterprise are discussed. The book is based on papers presented and discussed at the first Global Transfer Pricing Conference hosted in February 2016 by the WU Transfer Pricing Center at the Institute for Austrian and International Tax Law at WU (Vienna University of Economics and Business). The most up-to-date and thorough consideration of transfer pricing yet published; this book will prove invaluable for all parties currently facing questions related to transfer pricing in a post-BEPS world, especially those in charge of finding an ideal answer to them: academics, practitioners (including in-house and advisory counsel), international organizations, CEOs and CFOs of multinational enterprises, and government officials who are tax and transfer pricing experts.

Facilities planning for tourism, hospitality and events (THE) is an important subject from both theoretical and applied perspectives, as land, property and resources represent major components of the foundation of the industry. As future managers, it is imperative that students have a sound basic knowledge of property and the various resources, systems and services associated with it. Covering important contemporary subjects such as sustainable planning and environmental management, this book considers the planning, development and management of facilities operations from several key perspectives, drawing upon the expertise of complementary experts in the design, management and development of THE facilities.

The three volumes IFIP AICT 438, 439, and 440 constitute the refereed proceedings of the International IFIP WG 5.7 Conference on Advances in Production Management Systems, APMS 2014, held in Ajaccio, France, in September 2014. The 233 revised full papers were carefully reviewed and selected from 271 submissions. They are organized in 6 parts: knowledge discovery and sharing; knowledge-based planning and scheduling; knowledge-based sustainability; knowledge-based services; knowledge-based performance improvement, and case studies.
